TRICO PRODUCTS CORPORATION . BUFFALO 3, N. Y.

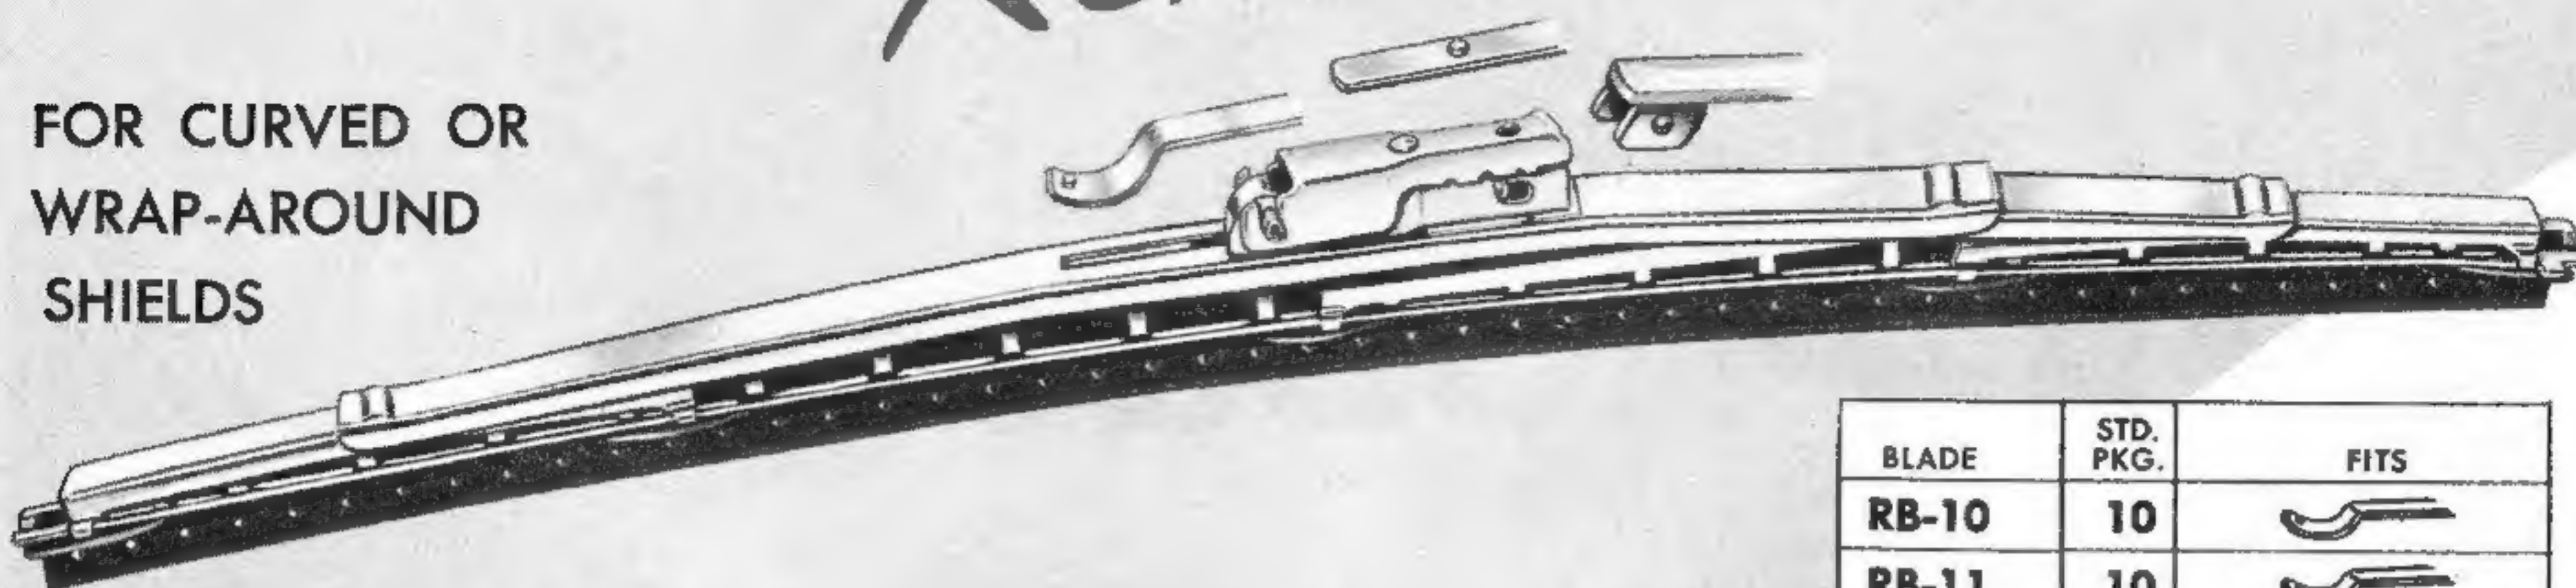

ORIGINATORS OF WINDSHIELD WIPERS USED BY THE MOTOR CAR INDUSTRY SINCE 1917

WINDSHIELD WIPER BLADES

Rainbow

FOR CURVED OR
WRAP-AROUND
SHIELDS

Trico Rainbow Blades fit all curved or wrap-around windshields. No adaptors required. Sleek, stainless steel construction and low silhouette harmonize with the car design. RB-12 with adjustable sweep selector can be used to replace all 10", 11", and 12" Blades using wrist action, bayonet, or pin type Arms.

BLADE	STD. PKG.	FITS
RB-10	10	
RB-11	10	
RB-12	10	
RB-12-2	10	
RB-15-2	10	
RB-16-2	10	

PR-Rainbow

FOR
WRAP-AROUND
SHIELDS

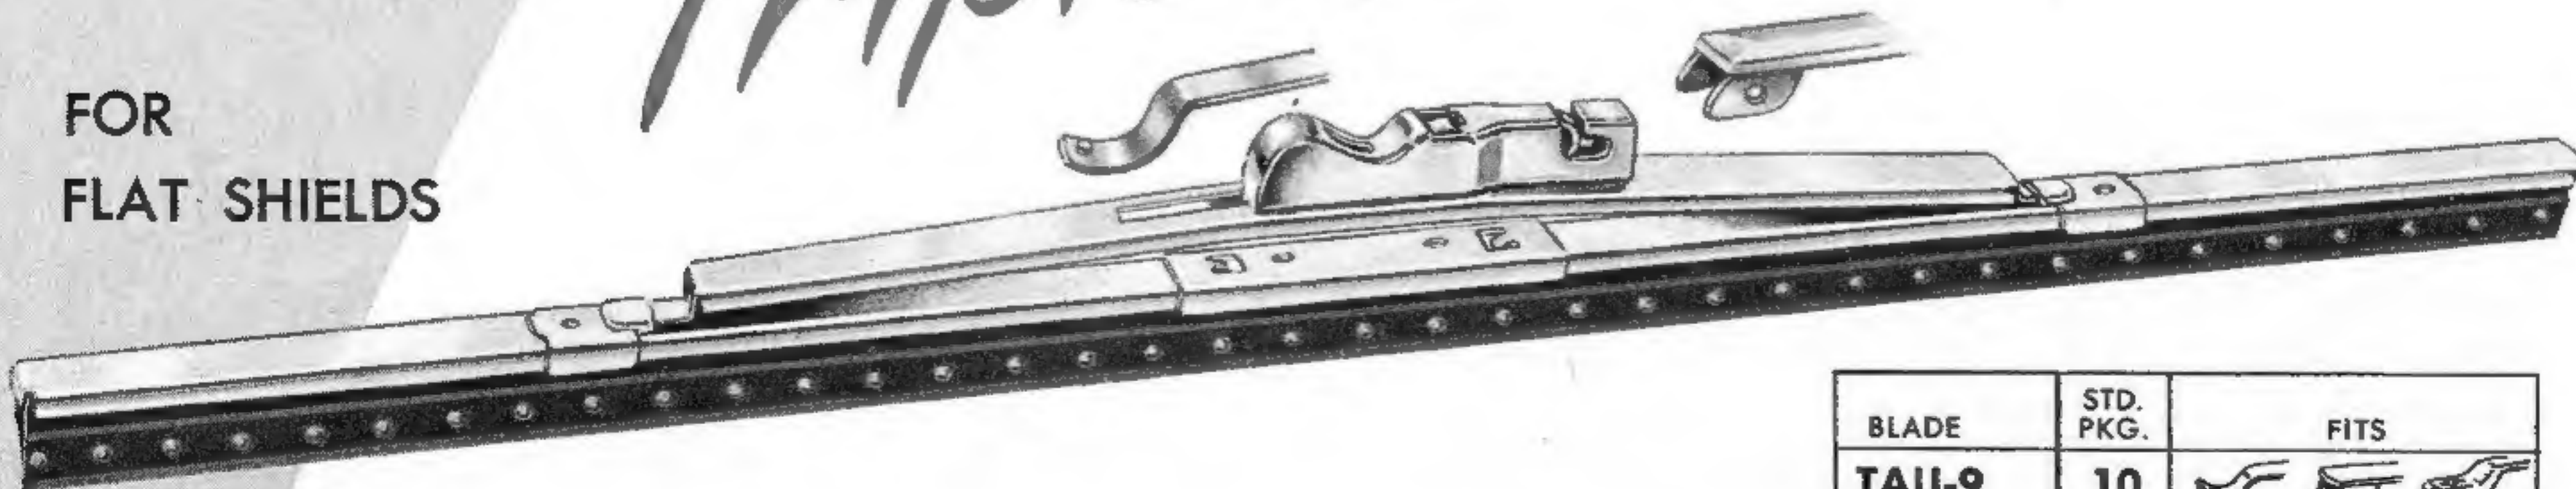

Trico PR Rainbow Blades are designed for wrap-around shields. The stainless steel channel is preflexed to conform to the curvature of the shield. Low turning couple avoids Arm twist. PR-12-2 and PR-13-2 fit the original equipment bayonet Arm. PR-16 fits pin type Arm used on late model Chrysler built cars.

BLADE	STD. PKG.	FITS
PR-12-2	10	
PR-13-2	10	
PR-16	10	

Triple Action

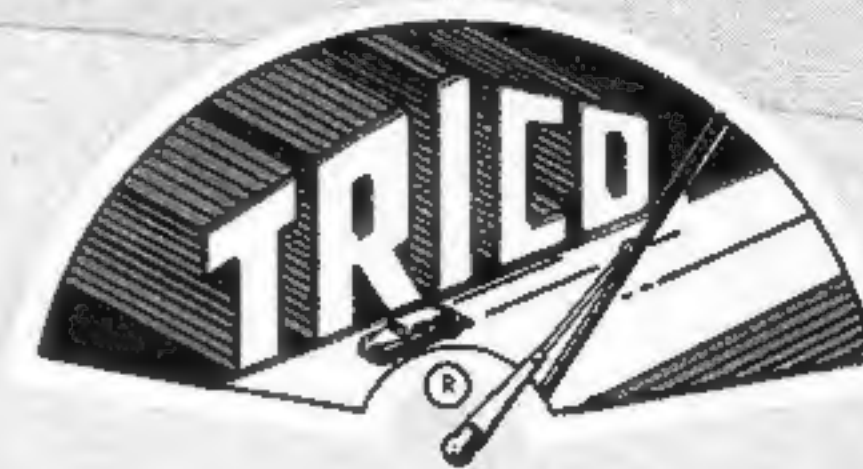

FOR
FLAT SHIELDS

Trico Triple Action Blades fit all Wiper Arms, all flat windshields. Adjustable sweep selector raises or lowers wiping arc, permits interchangeability of sizes. TAU-10" can be used to replace 8 1/4", 9", and 10" Blades; TAU-12 to replace 11", or 12" Blades. No adaptors required.

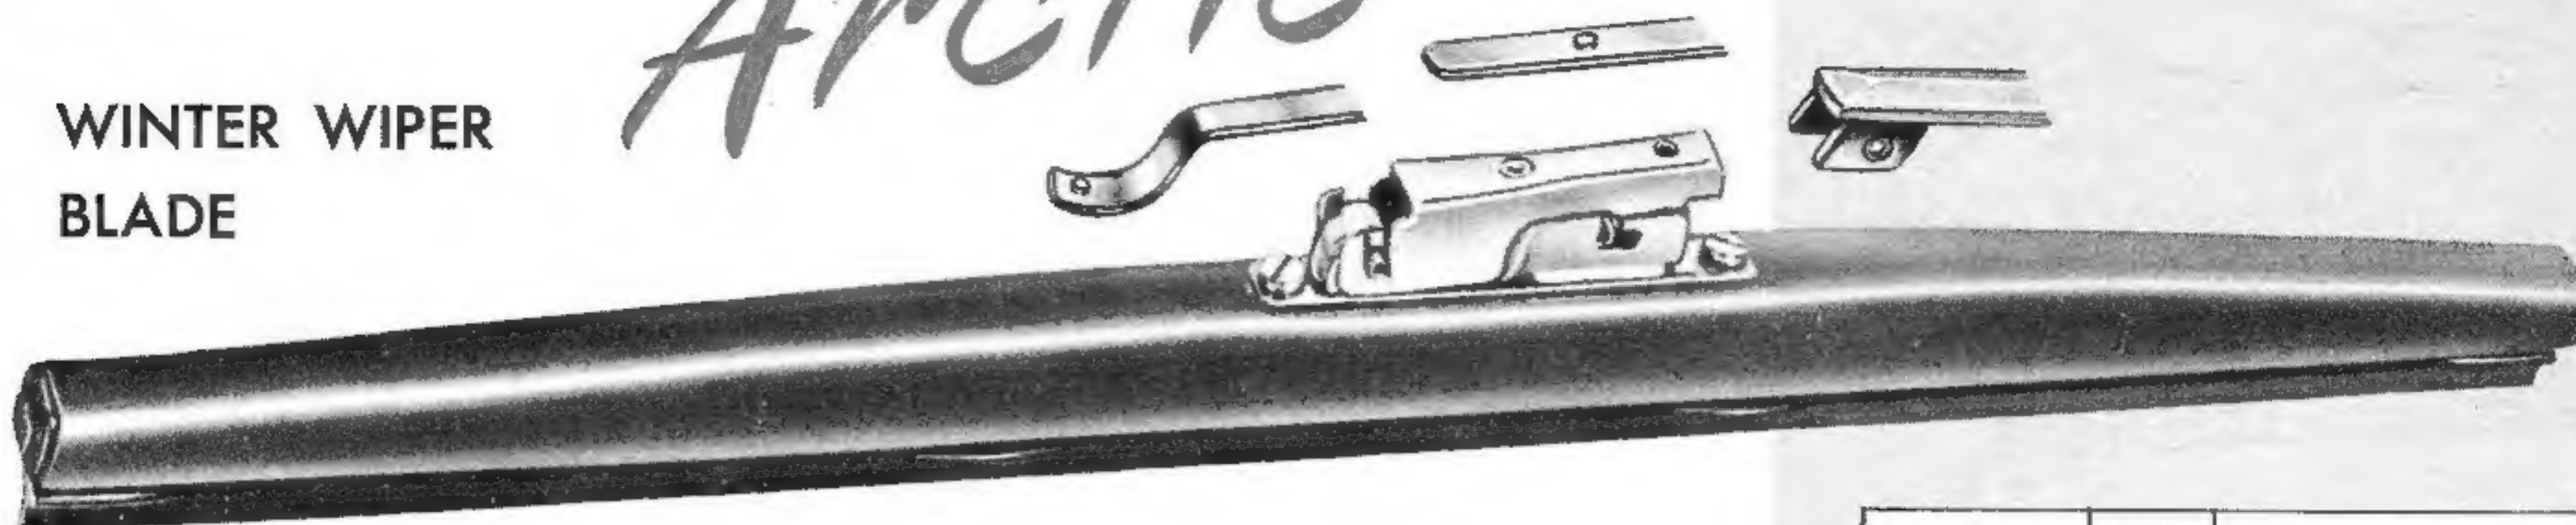

BLADE	STD. PKG.	FITS
TAU-9	10	
TAU-10	10	
TAU-11	10	
TAU-12	10	

WINTER BLADES AND WIPER ARMS

Arctic

WINTER WIPER BLADE

Trico Arctic Blades fit all original equipment Arms on cars with curved or wrap-around windshields. No adaptors required. The flexible ice-repellent hood de-ices itself as it wipes...shedding snow, sleet, and freezing road splash. No exposed parts to snow clog or freeze. AR-11-1 fits wrist action, bayonet, and pin type Arms. AR-13-2 fits bayonet Arm, AR-15 fits the bayonet or pin type Arm used on late model cars.

BLADE	STD. PKG.	FITS
AR-11-1	10	
AR-13-2	10	
AR-15	10	

Adjustable Arms

FOR ALL CARS

- Streamlined stainless steel construction
- Factory set spring tension for correct pressure
- Positive locking length adjustment
- Adjustable swivel connector for proper Blade angle

ARM	STD. PKG.	ADJUSTMENT
AL-60	5	8" to 11 1/4"
AL-150	5	11 1/4" to 14 5/8"
AL-225	5	For Foreign Cars

Trico Adjustable Wiper Arms fit exactly the knurled driver used on most cars since 1941. For other cars with threaded shafts, the necessary adaptors are included in the Arm box. Both AL-60 and AL-150 are packed with wrist action and bayonet Blade connectors. AL-150 is designed for late model cars with curved or wrap-around windshields. AL-225 is designed for use on foreign cars — all necessary fittings are furnished in the package.

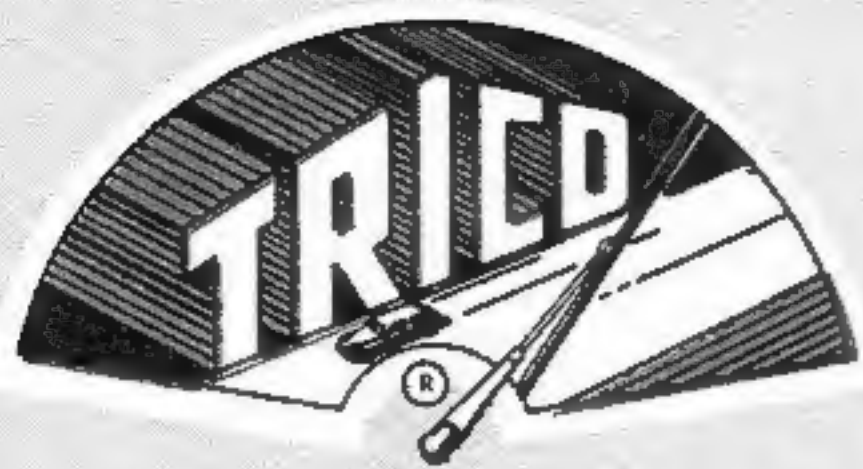

FOR WRAP-AROUND SHIELDS

Cam-O-Matic

For complete wiping of the wrap-around windshield, the Trico Cam-O-Matic Arm automatically pivots the Blade around an axis radial to the wiper shaft. Guided by a cam, the Wiper Arm rotates to position the Blade for controlled wiping contact and to maintain perfect wiping angle throughout the full sweep of Blade travel.

First used as standard equipment on 1955 cars. When ordering replacement Arms, refer to car specification section for number.

FULLY COORDINATED WINDSHIELD WASHERS

One Touch does Everything Automatically!

Start it! Forget it! the Trico Coordinated Washer Completes the Washing-Wiping Cycle Automatically!

A touch of the button starts it... then you forget it. The water jets... in a split second the self-starting wipers come on... wet scrubbing the glass to remove all traces of wheel spray, traffic film and dirt.

Then automatic timing takes over again, the water stops... the wipers continue on until the glass is dry. After the pre-set cycle to dry the glass the wipers stop and automatically park themselves.

AND you're safe against smear!

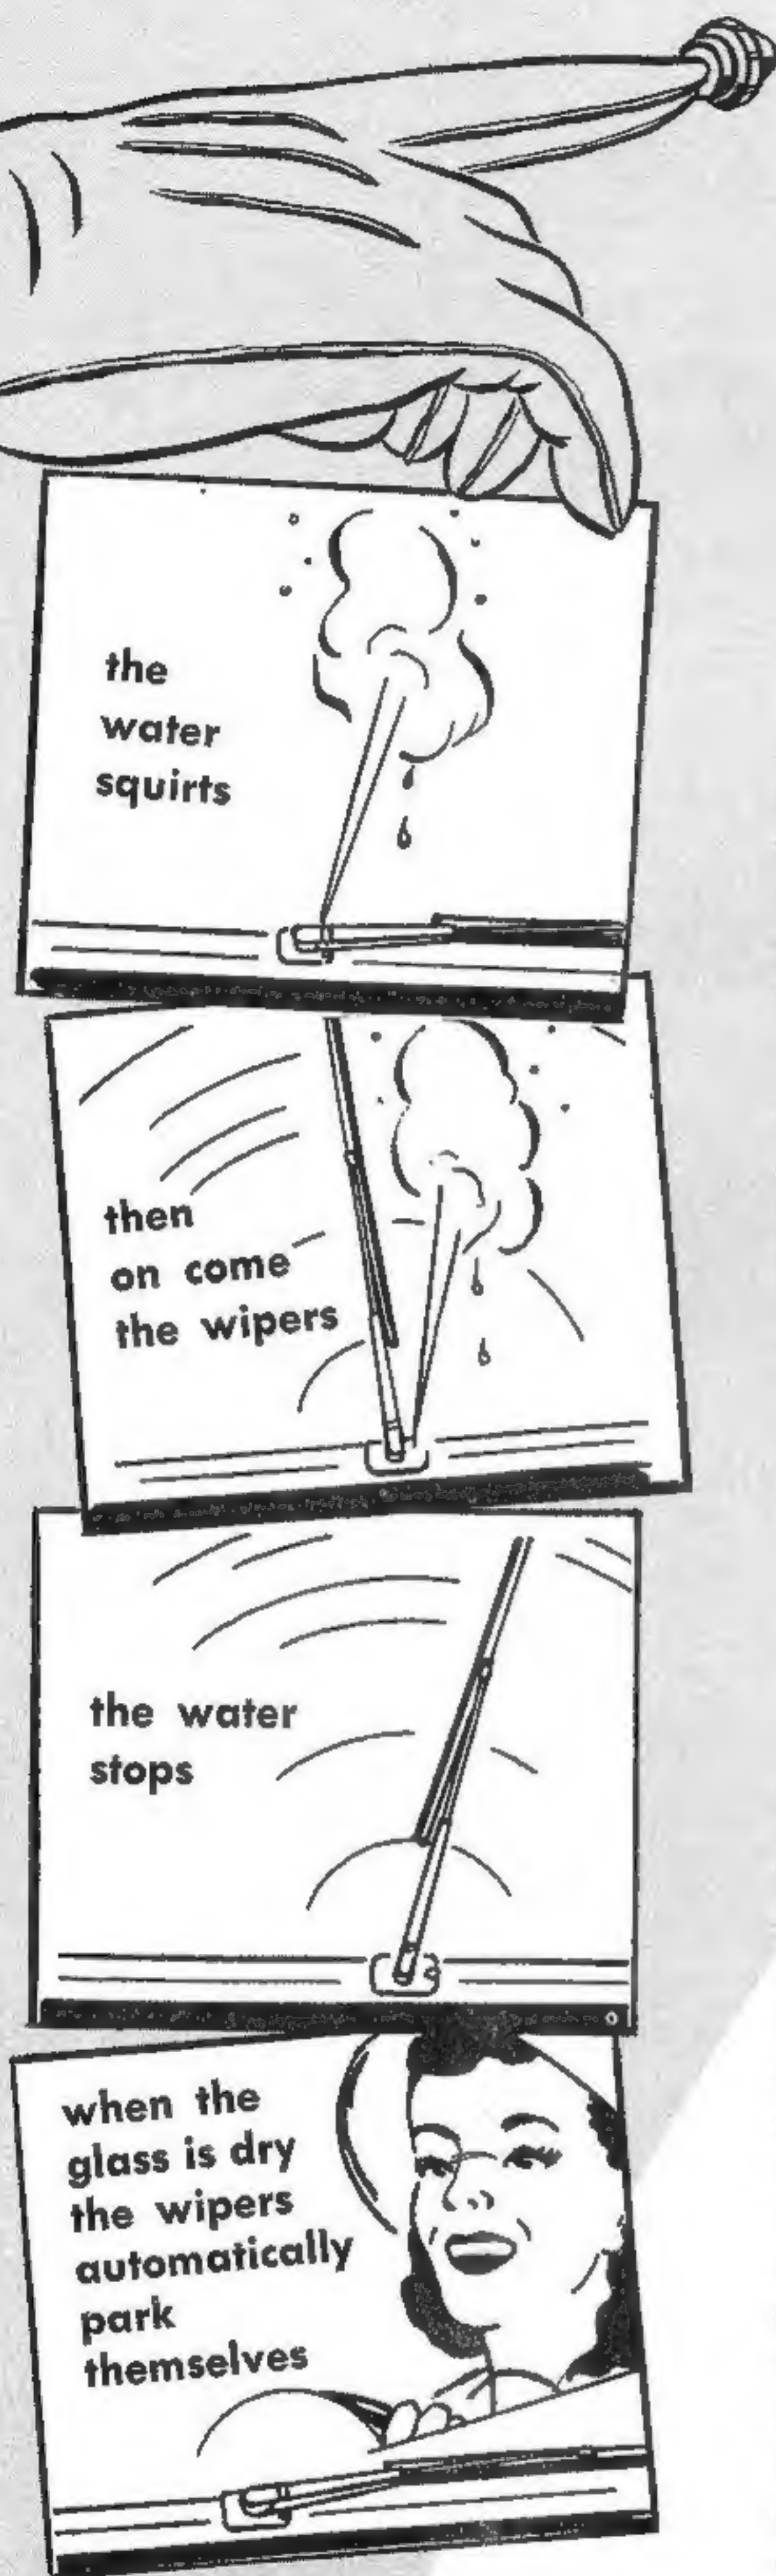

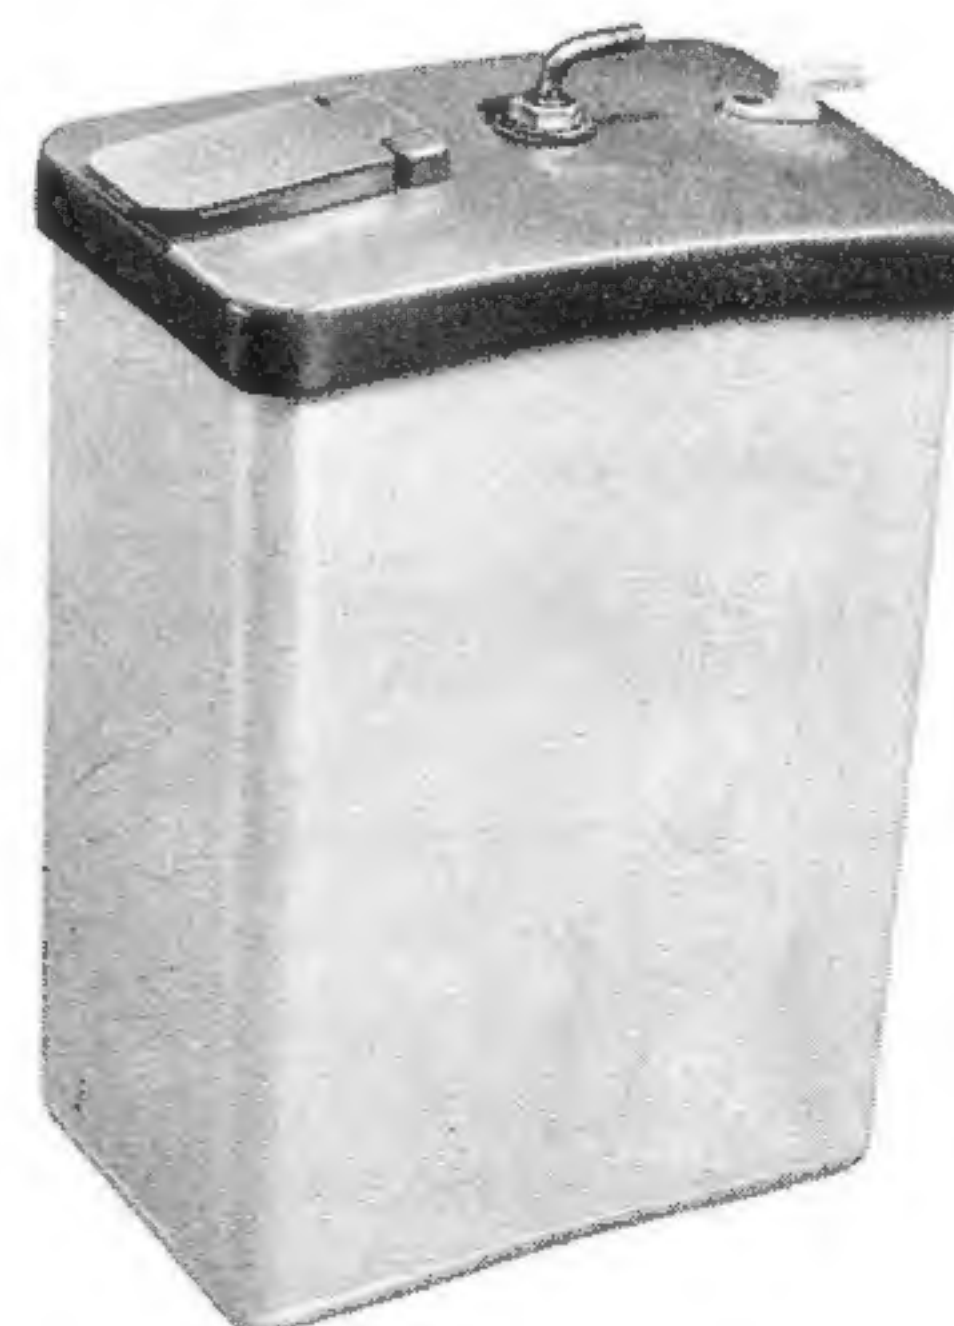

If wiper blades are allowed to run dry over wheel spray or road splash, it creates a dangerous smear across the vision area. With the C-O System this can't happen because the self-starting wipers are controlled by water pressure. If refilling is forgotten and the washer tank is empty, the washer pump can't turn on the wipers.

New FULLY COORDINATED WINDSHIELD WASHERS with self-starting — self-stopping control...

- Dependable
- Fully coordinated
- Compact
- New plastic tank
- Service-free operation
- No battery drain
- No water connection to wiper motor
- No short circuits

The new Trico fully coordinated washer is designed for installation on 1959 and later model cars. Complete sets are available for use with either vacuum or electric windshield wipers. Each package contains all fittings necessary to complete the installation. Sets engineered for use with electric wipers operate with either single or dual speed motors.

How to order... You'll find all washer installations charted by year and make of car in application chart on page 6. Listings show correct washer model for either electric or vacuum wipers.

the water squirts

then on come the wipers

the water stops

when the glass is dry the wipers automatically park themselves

New INSTANT ACTION WINDSHIELD WASHER AW-24-1

The Trico instant action washer is designed for universal application on all passenger cars and commercial vehicles. New space-conserving plastic tank mounts in any convenient location. This is the standard hi-pressure vacuum powered washer used as equipment on millions of cars... only Trico washers are vacuum power operated... simply touch the button, the washer jets a measured stream of water on the shield for several seconds, turning off automatically.

New... Foot Powered Washers

AWF 8

Trico's foot lever power washer is designed for universal application on all passenger cars or commercial vehicles. Self-powered — no connection to the motor required. New compact plastic reservoir mounts in any convenient location — requires only 6 x 7½" of mounting space.

Adjustable nozzles permit proper positioning of water spray for best cleaning action.

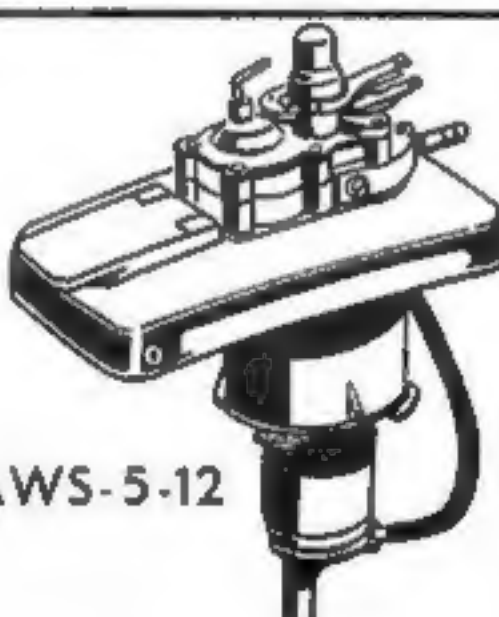

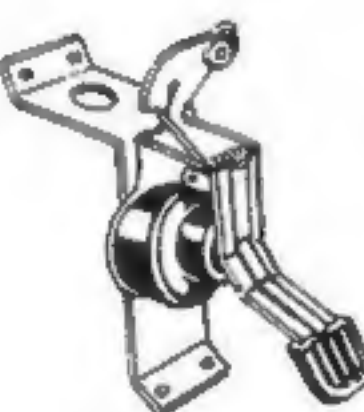

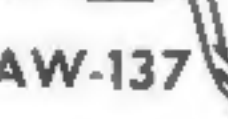

AWF 9

New universal model designed to fit all foreign built cars.

This washer is furnished with plastic bag and bulb type foot control, for installation in the limited space available in these cars. Packed complete with adjustable nozzles and all necessary fittings.

WINDSHIELD WASHER SOLVENT

For all Windshield Washers, Vacuum, Foot Operated and Electric

WA-30 — 6 oz. bottle

Shipper WA-30-12 (12 WA-30)

Sell safer year 'round vision with Trico All-Season Solvent... dissolves dangerous windshield film, bugs, smear in Spring, Summer and Fall... in Winter prevents jar breakage due to freezing.

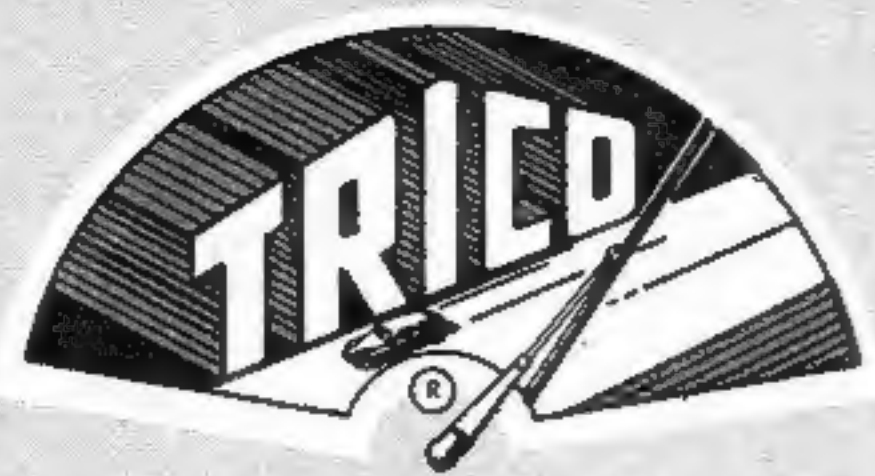

Anti-Freeze SOLVENT

WA-16 — 16 oz. can

Shipper WA-16-12 (12 WA-16)

A specially compounded anti-freeze solvent for Winter use. Permits operation of washer at below-freezing temperatures to remove blinding salt or calcium deposits on the windshield due to road spray. Improves vision and eliminates eye strain.

GLASS CLEANER • VACUUM MOTORS • LINKAGES

New! GLASS CLEANER *Concentrate*

GC-5, One Quart Can . . . Standard Shipping Carton 12, GC-5

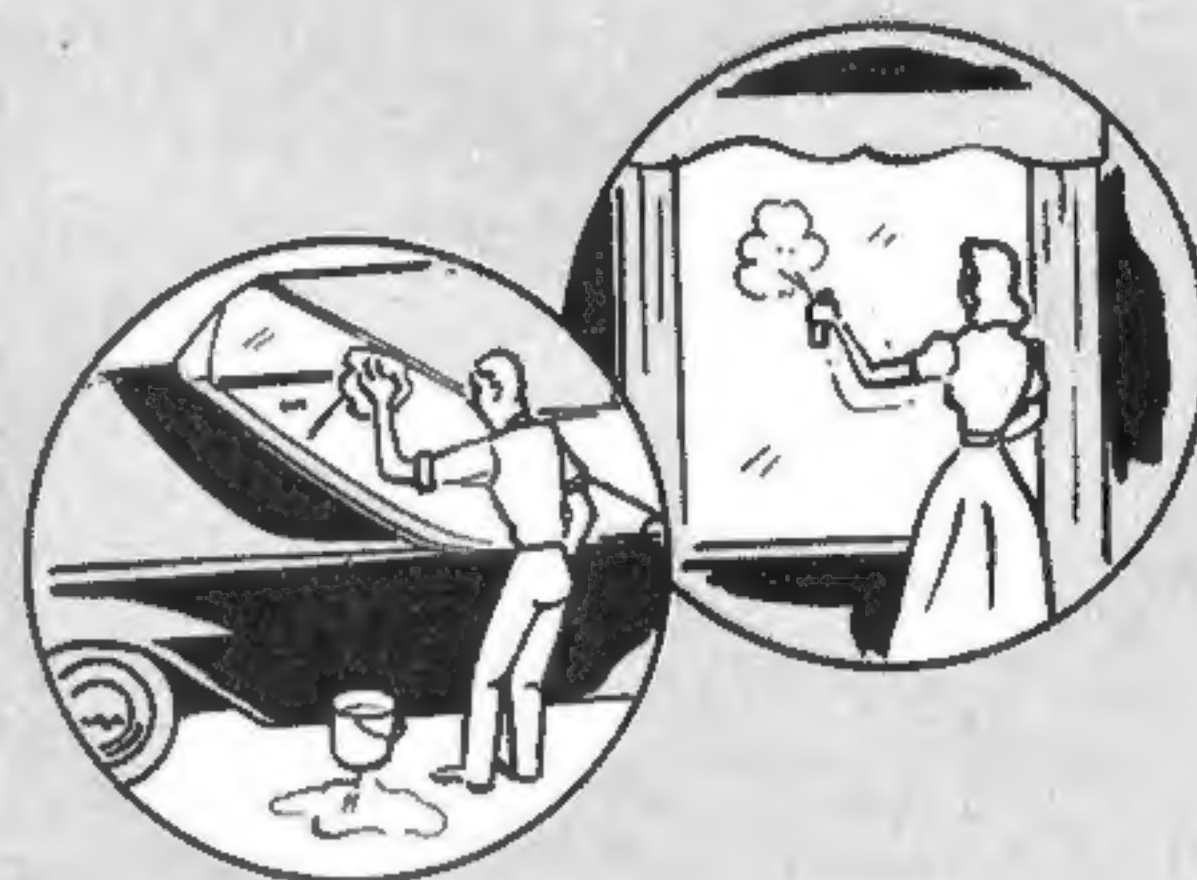

A concentrated windshield cleaning solution to be mixed with water before application, one quart makes 20 quarts of glass cleaner. Spray on—wipe off—and it's clean. Cuts through windshield film, grime, bugs and oily deposits efficiently and safely. Will not injure lacquer—wood—rubber or metal finishes.

AUTOMOTIVE USE . . .

Use on windshield, windows and plastic or leather car upholstery. For car washing add 2 oz. concentrate to a 12 quart pail of water.

HOUSEHOLD USE . . .

Ideal for cleaning windows, mirrors, tile walls, asphalt tile floors, woodwork or any glass, metal or painted surface.

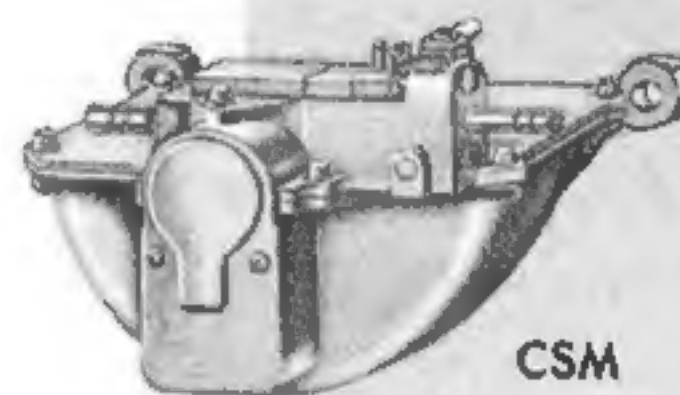

WIPER MOTORS

Trico wiper motors are in use as original equipment on millions of vehicles. Rugged construction and a minimum of moving parts assure years of dependable operation. Trico wiper motors are built to fit the car. For new car performance . . . renew with Trico wiper motors that match exactly the original equipment model. Nothing to rig. Nothing to adjust.

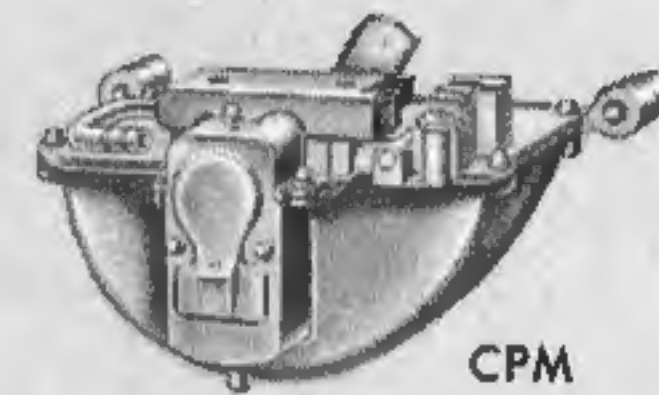

Specify unit number or year, make, and model of vehicle. Specification section lists permanent service motor number and optional replacement (See car specification section).

KSB POWER UNITS

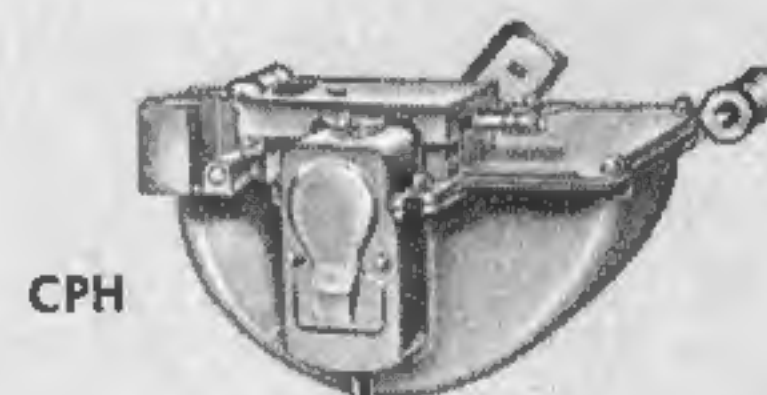

Six KSB interchangeable power units provide replacements for a wide range of original equipment KSB type motors. Each motor is packed with two interchangeable shafts. Correct motor number to use is listed in car specification section.

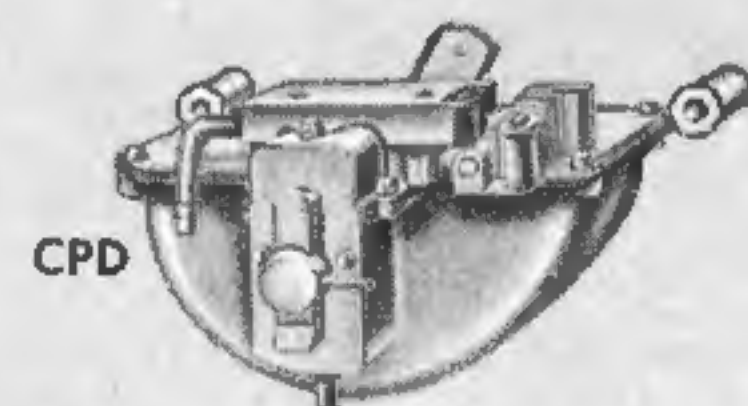

CSM

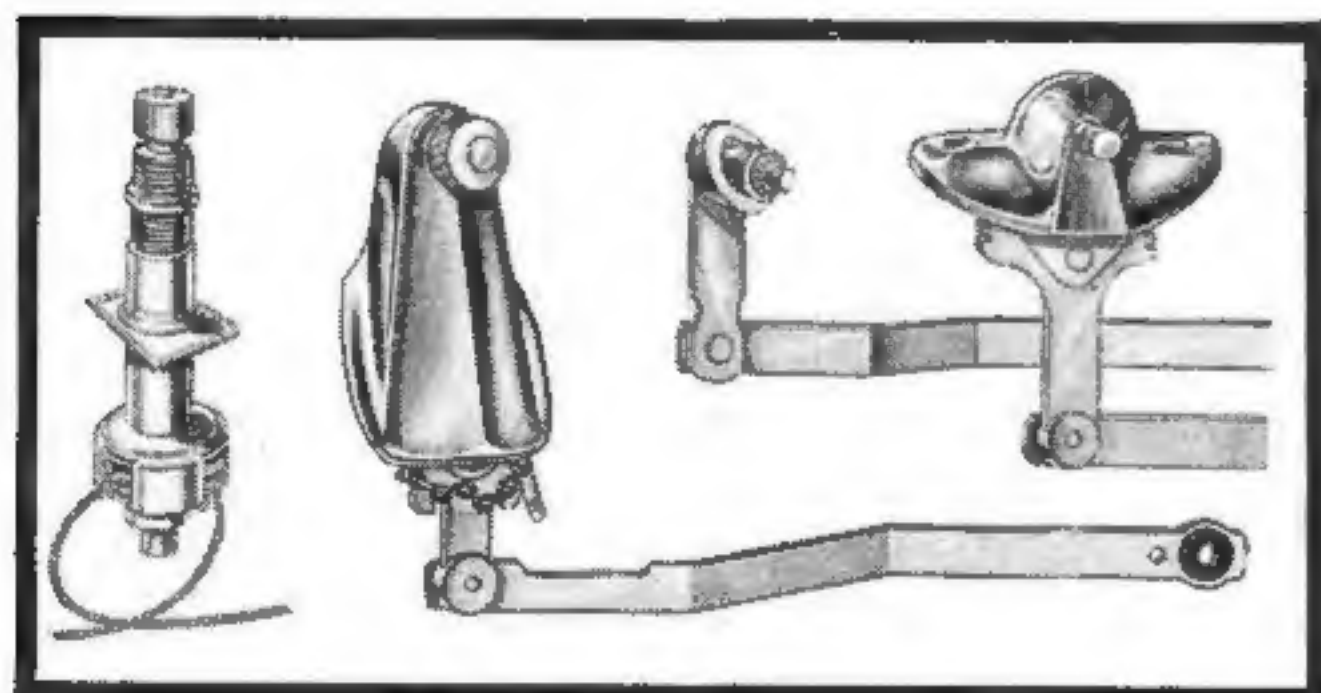

CPM

CPH

CPD

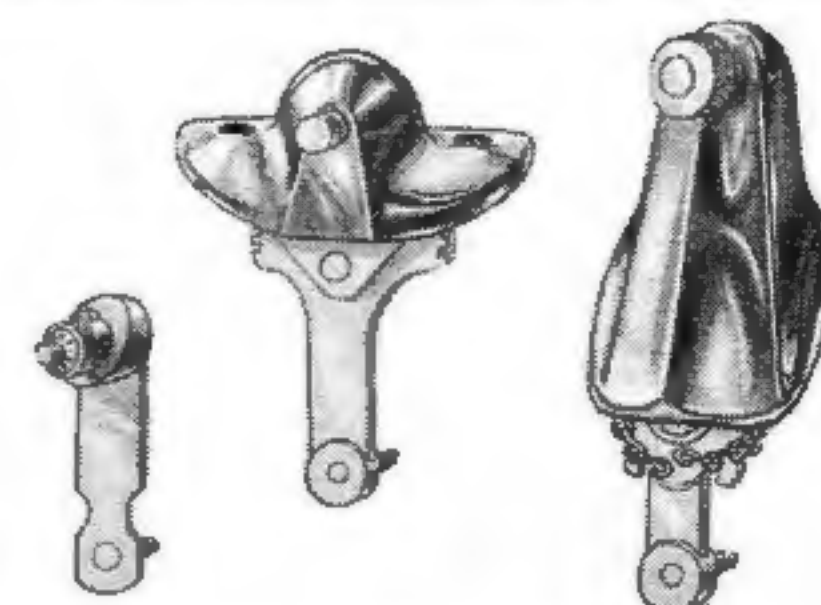

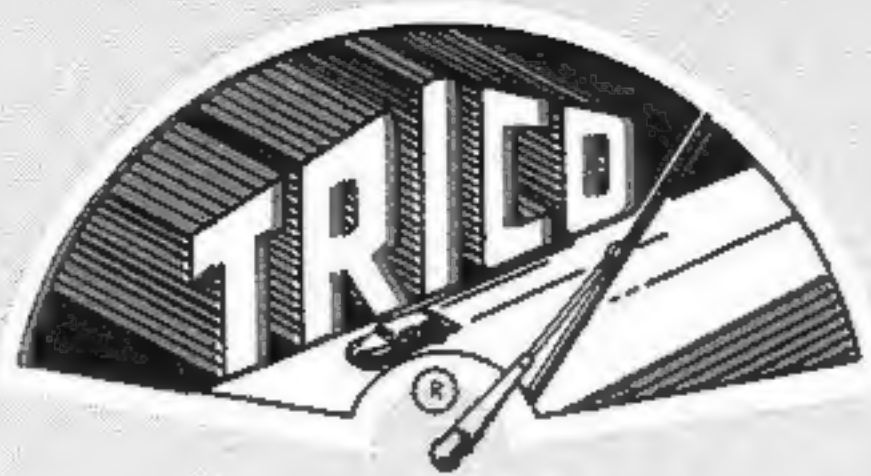

WIPER LINKAGES

Wiper linkages are produced in a number of models to fit the car body. For identification purpose, the part number is stamped on the cross arm or linkage head.

How to order . . . Specify unit number or year, make, and model of vehicle. Car specification section provides complete list of linkages or linkage heads for service replacement. For tensioners used with cable linkages, refer to DM-3000 Service & Specification Manual.

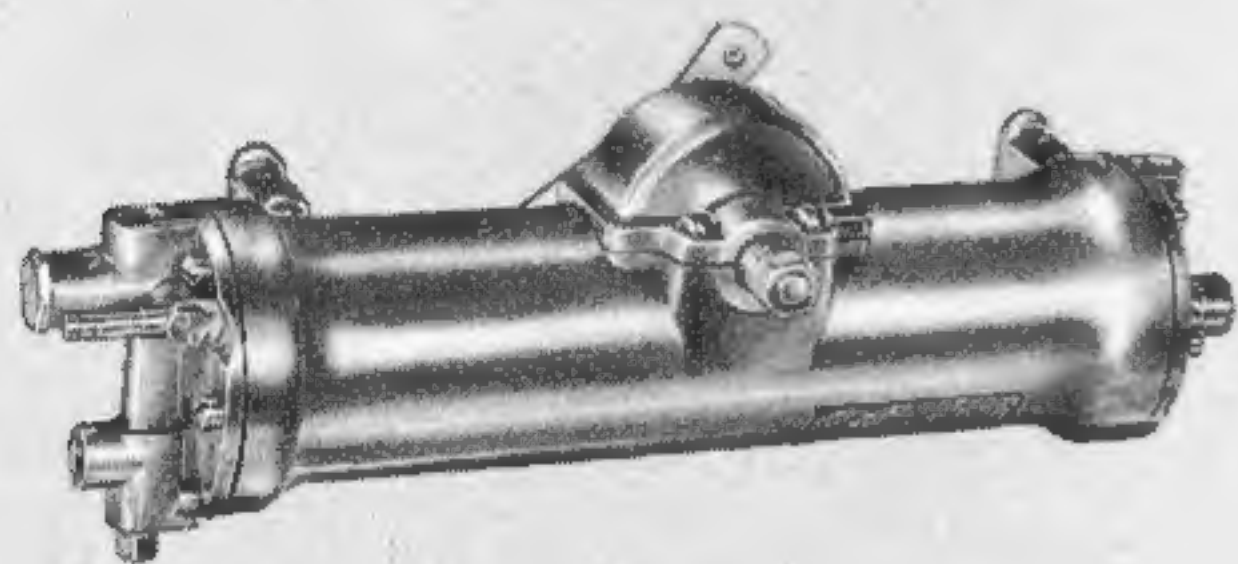

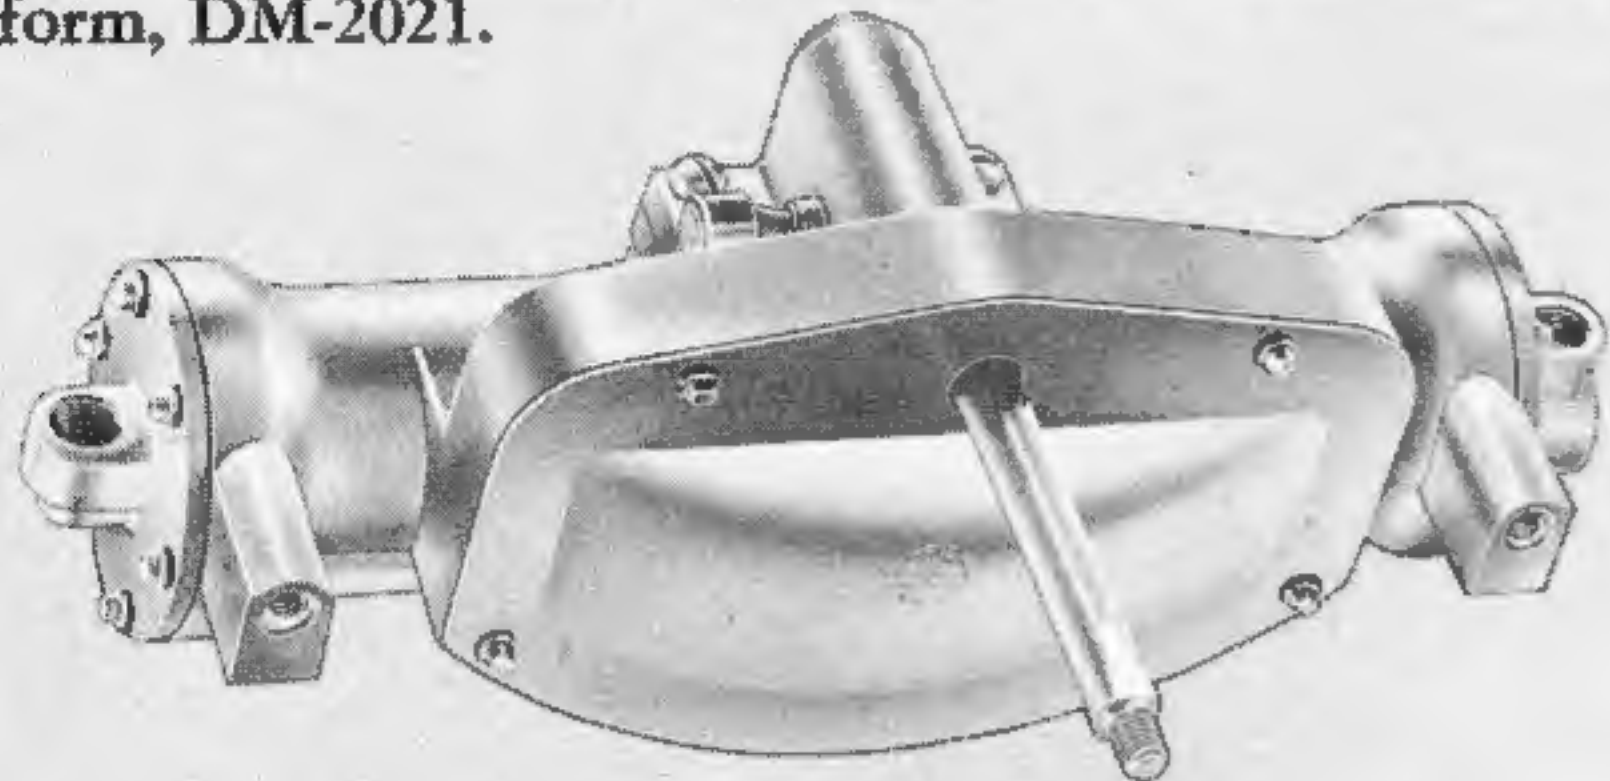

LINKAGE HEADS FOR SERVICE REPLACEMENT — Linkage heads match exactly the standard equipment model, but are furnished without the connecting arm. To assemble as a complete linkage, remove the connecting arm from the old linkage and attach to threaded stud on linkage head. Refer to car specification section for correct number listed by year and make of vehicle.

HEAVY DUTY AIR PRESSURE EQUIPMENT

Trico Air Pressure Windshield Wipers are manufactured in a wide range of standard and heavy duty models. These Motors are designed to meet the rugged heavy duty requirements of trucks, buses, and all other commercial vehicles. For new Air Wiper installations, Trico engineers will recommend the best equipment for any vehicle. Complete windshield specifications should be listed on Trico order form, DM-2021.

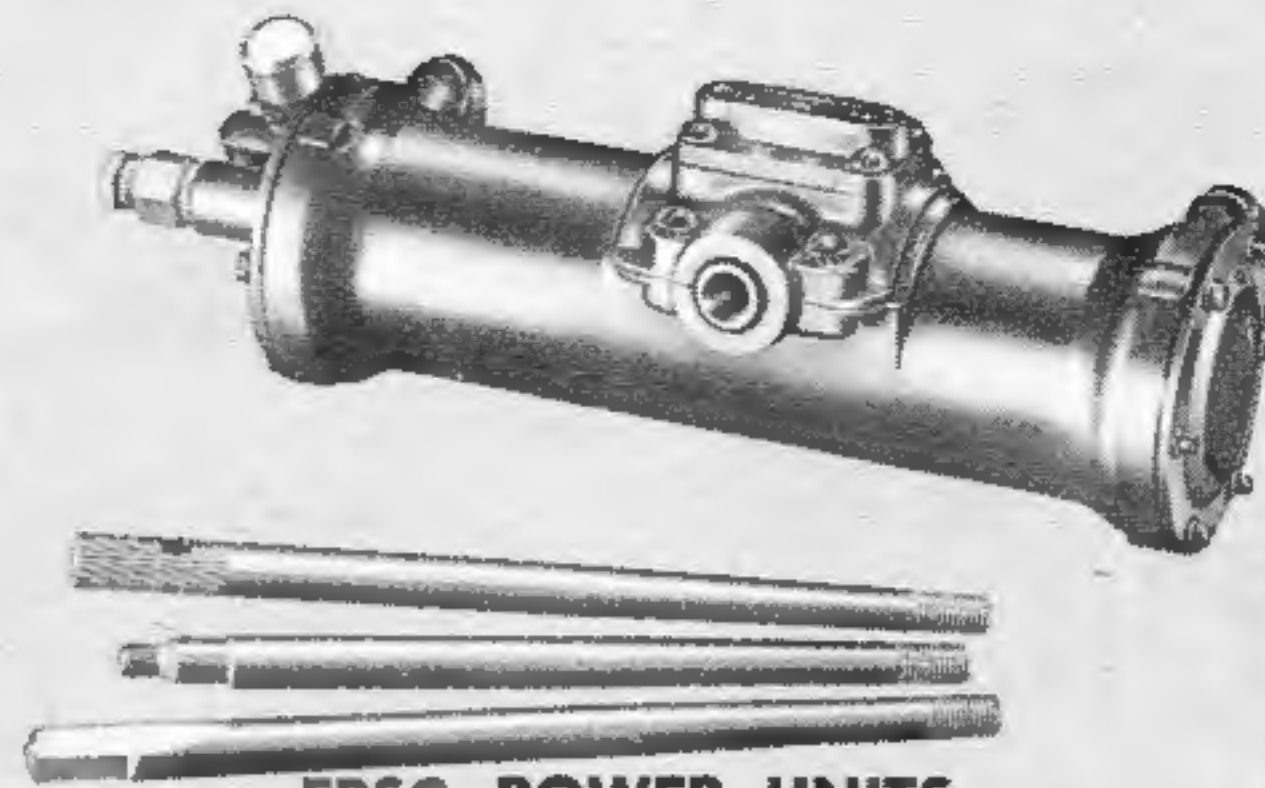

APM AIR PRESSURE MOTOR

Arcuate type Pressure Motor — minimum mounting space requirement... abundant power... works effectively either for direct operation of Arm and Blade, or for linkage drive. Order by year, make, model of vehicle, or Motor number.

AIR PRESSURE CONTROLS

- 75470-4 1/4" fittings used with FP, FPC, and FPSC Motors.
- 75470-5 3/16" fittings used with FP, FPC, and FPSC Motors.
- F-1500-6 used with FPSP Motors.
- F-1430 used with FPK Motors.
- F-1560-1 used with FDC Motors.

FPSC POWER UNITS

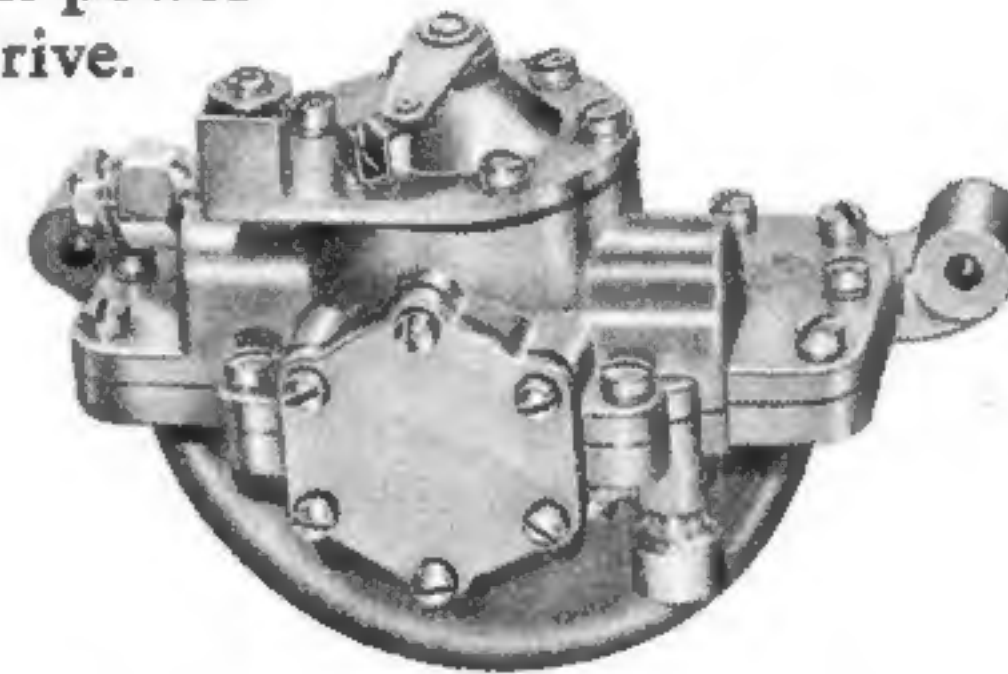

Trico FPSC Power Units replace all FP, FPS, FPC, FPSC, and FPSP models. These units feature leak-proof valve construction, cushioned stroke, molded piston packing, positive locking interchangeable shafts. 19 numbers replace 450 original equipment units permitting standardization of fleet service stock. Available in all strokes 50° - 140° with left or right hand air inlet (right hand units provided with parking connection). For complete details, see FPSC catalog sheet, DM-2031.

FPK AIR PRESSURE MOTOR

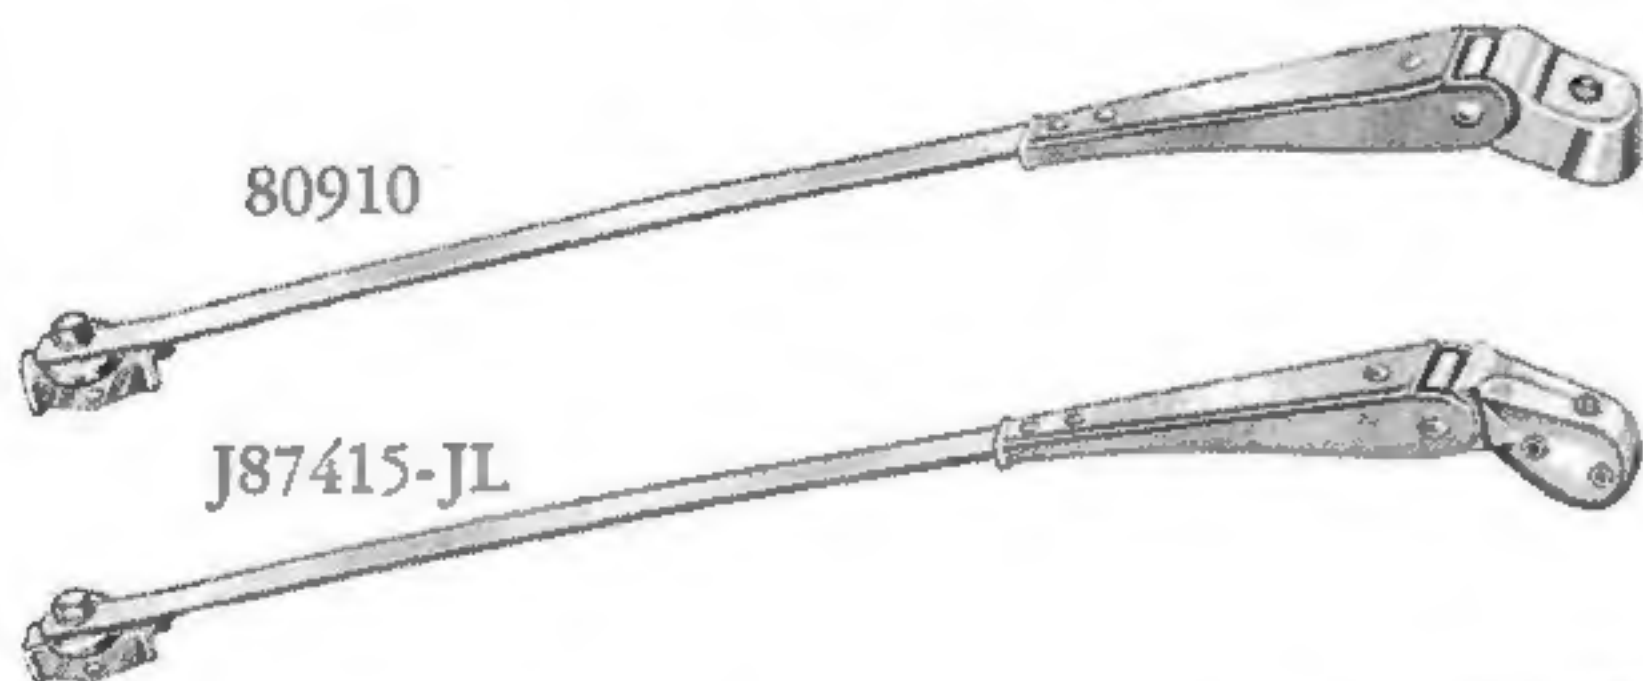

Special heavy duty unit recommended for urban public carriers. Particularly adapted for use with long Blades and Arms. Order by year, make, model of vehicle or Motor number.

FDC AIR PRESSURE MOTOR

Most powerful Air Wiper in the Trico line, especially developed to operate two Heavy Duty Arms and Blades through linkage drive. Order by year, make, model of vehicle, or Motor number.

HEAVY DUTY WIPER ARMS AND BLADES FOR ALL COMMERCIAL VEHICLES

WIPER ARMS

Trico Heavy Duty Arms are designed for use with the Air Pressure Wipers shown above. Factory set spring tension provides correct wiping contact. Adjustable Blade connector permits positioning of Blade for maximum vision.

80910 . . . for use with knurled shafts

9", 10", 12", 13", 14", 15", 16", 17", 18"

J87415-JL . . . for use with tapered flat shafts

9", 10", 11", 12", 13", 14", 15", 16", 17", 18"

WIPER BLADES

Trico Heavy Duty Blades are built to withstand hard commercial usage. The sturdy, stainless steel channel and extra-heavy hollow-cut wiping element provides positive wiping contact.

for flat shields . . .

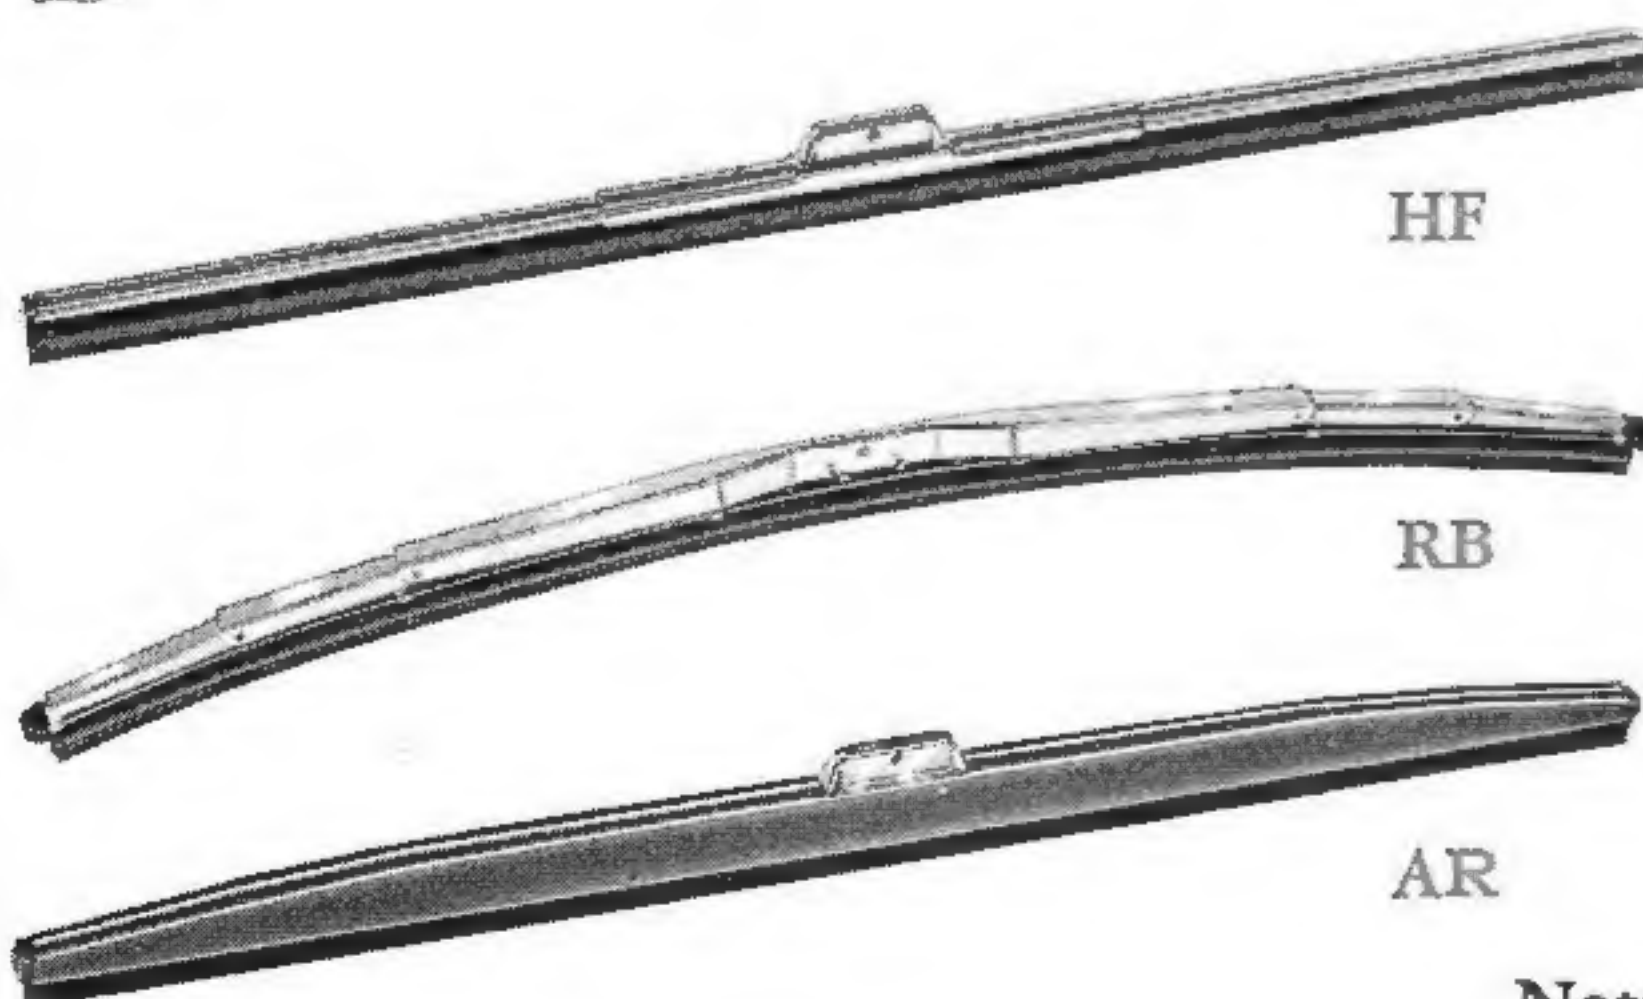

HF-12, HF-14, HF-16, HF-17, HF-18, HF-19, HF-20, HF-21

for curved shields . . .

RB-214, RB-216, RB-218, RB-220

AR-215, AR-218 Heavy Duty Arctic Blade for winter use.

Note: Last two digits of above blade numbers indicate length.

WIPER HOSE • TANKS • ELECTRO-VACS • CLAIREONS

WINDSHIELD WIPER HOSE

Boxed Hose

846 (90") 3/16"

848 (90") 1/4"

F-15 (90") 1/8"

50 Ft. Spools

Sp. 555-1A 3/16"

Sp. 555-2A 1/4"

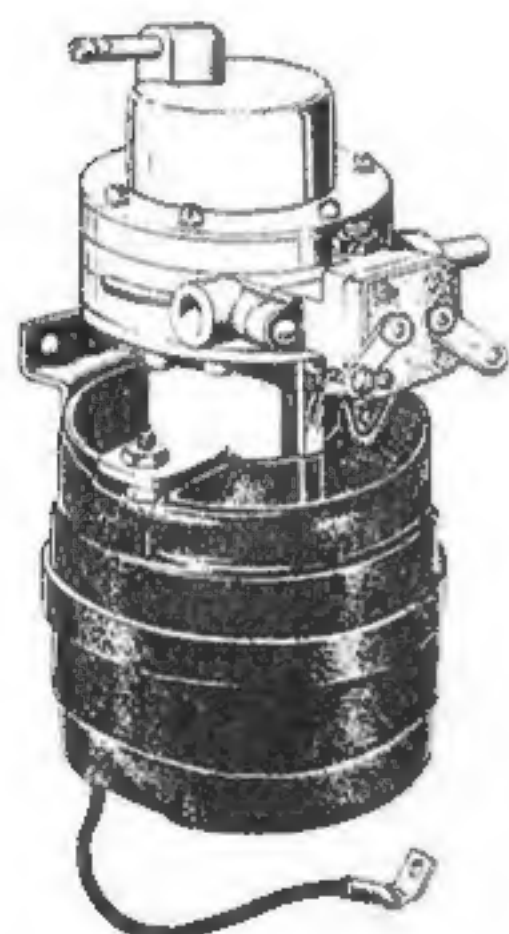

Sp. 555-5A 1/8"

Trico fabric inserted hose is especially constructed for use with vacuum equipment. Trico hose permits full passage of air. It is compression proof, kink proof, as well as resistant to heat and oil. 1/4" hose is used on most vacuum wipers. 3/16" and 1/8" sizes are used on Windshield Washer vacuum and fluid lines.

RESERVAC TANKS

Sp. 599-52A (540 cubic inches)

Universal Model Reservac for all cars and trucks. This Reservac provides ample reserve of vacuum to assure steady, even wiper operation under periods of sharp acceleration or when vehicle is operating under a load. Flat surface of the Tank readily mounts against under surface of car floor. No moving or wearing parts. Other sizes of Reservac Tanks are also available.

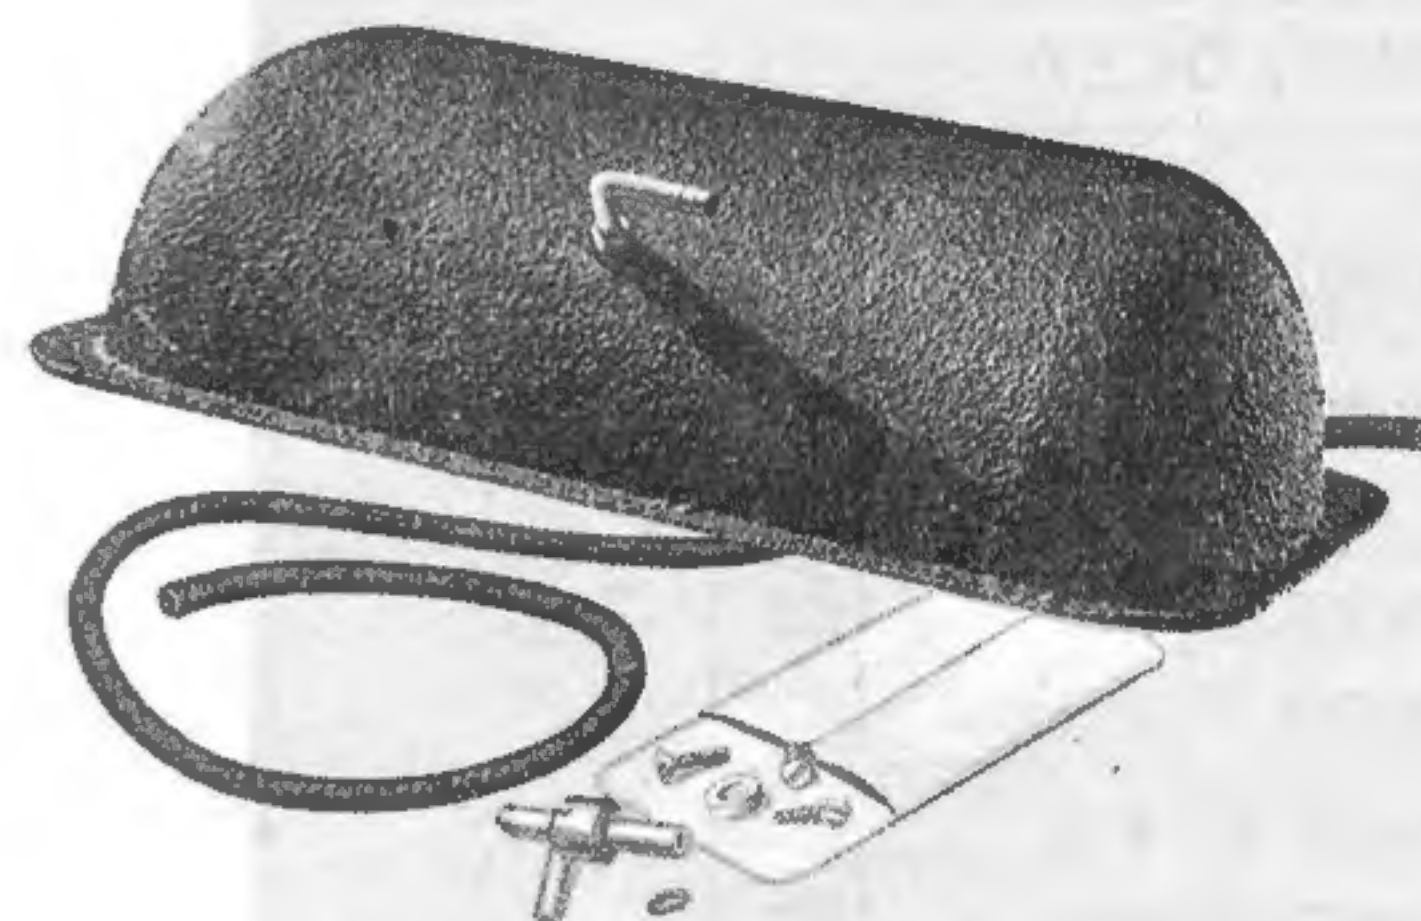

ELECTRO VAC

EV-105 (6-volt)

EV-112-1 (12-volt)

The Electro Vac is an electrically operated vacuum pump designed as an auxiliary to maintain vacuum at high altitudes or when vehicle is operating under extreme heavy load. Equipped with a separate illuminated control switch the Electro Vac automatically cuts in when manifold vacuum drops. Recommended for installation on commercial vehicles, school buses and public carriers not equipped with air brakes, also adaptable for passenger cars.

CLAIREON TRUMPETS

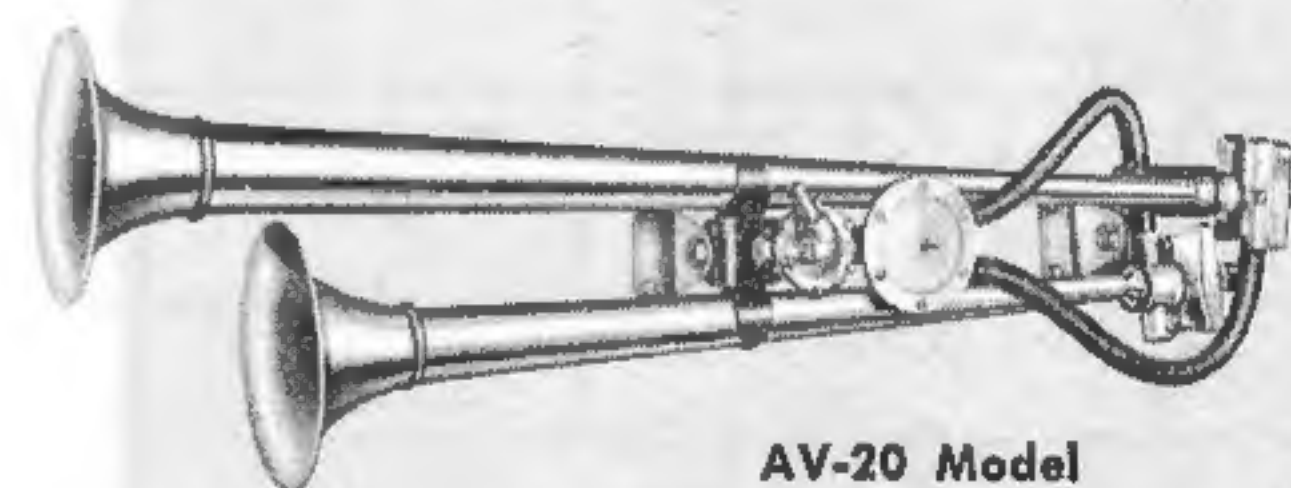

Trico's twin vacuum trumpets for all cars, trucks, and buses. Trico Claireons are among the most directional of all warning devices and produce a blended musical note that penetrates a full half mile under all driving conditions.

AV-20 Model — Designed for under the hood installation, the AV-20 Model may be mounted on the splash apron or any flat surface. Ample vacuum capacity is provided through the use of Sp. 599-52A Reservac Tank supplied with this model.

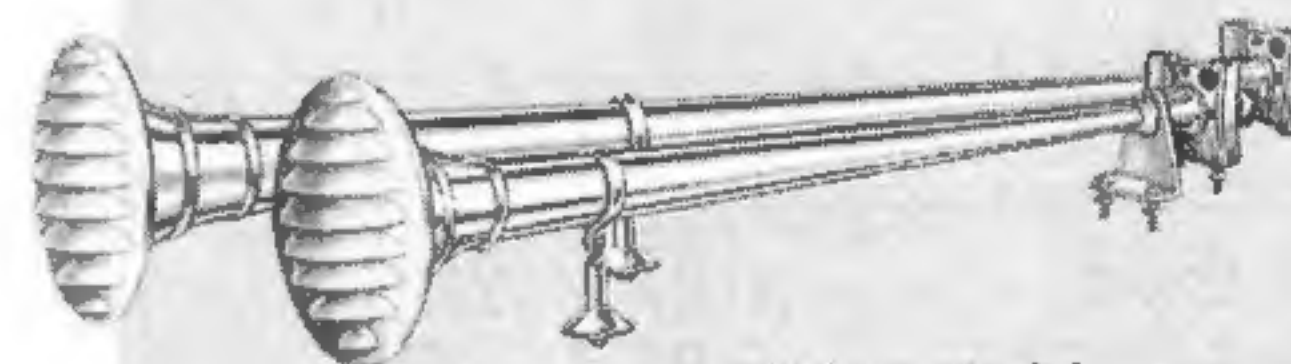

AV-10A — Harmonized set, full chromium plate, designed for use on the exterior in any desired position. Includes steering column vacuum control.

AV-10B — Full chromium plate harmonized set of Claireons, assembled with bracket as illustrated. This model has mounting advantages for exterior use. Supplied with all-vacuum controls for attachment to steering column.

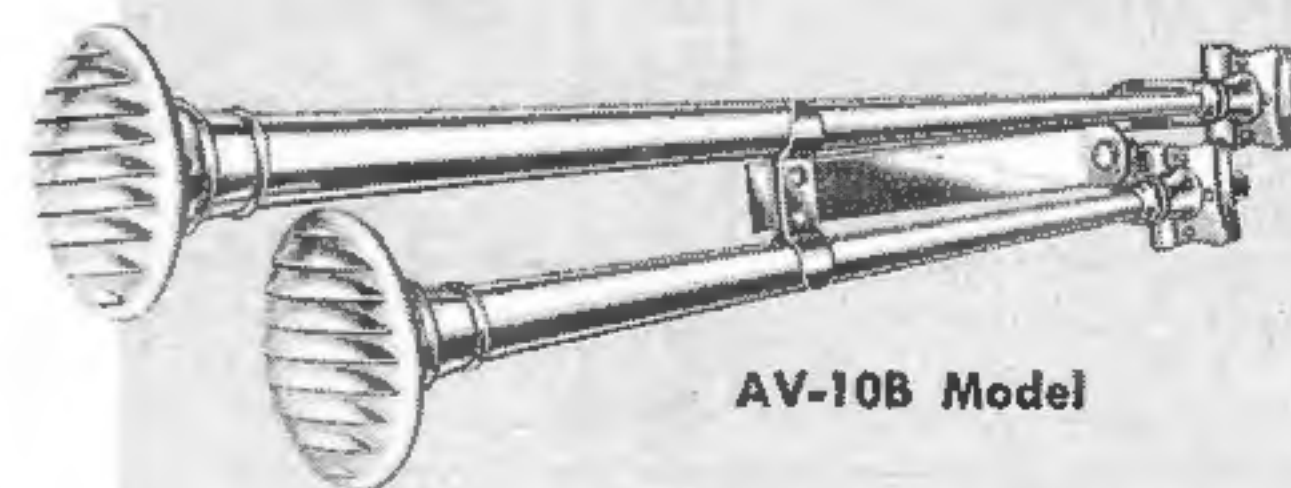

AIR PRESSURE TRUMPETS — P-20 — A twin harmonized set finished in metallic lacquer. Fitted with brackets for universal mounting on the outside or under the hood. Sounds a strong penetrating musical note that can be distinctly heard under all driving conditions. The ideal signal for commercial cars equipped with air brakes.

WINDSHIELD WIPER MAINTENANCE SERVICE

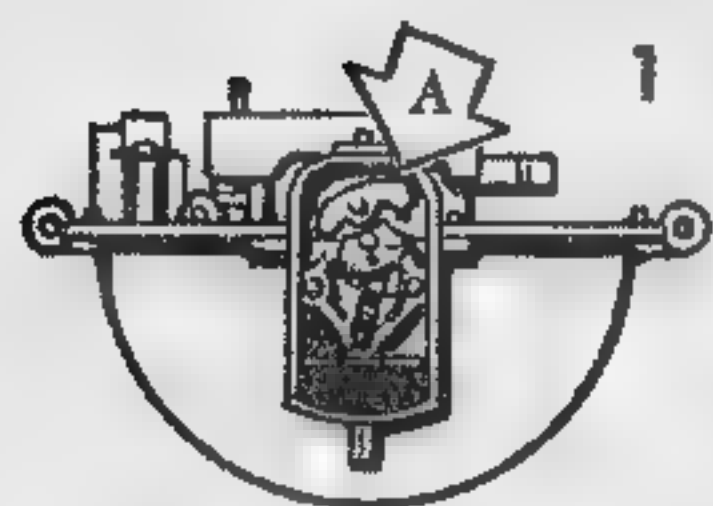

Trico windshield wiper equipment is built to fit vehicle body. Service procedure is determined by wiper location and construction engineered for various body types. You'll find all wiper installations charted and described in Trico Service and Specification Manual DM-3000.

This complete parts and service specification manual combines numerical parts charts and service instructions with complete by-car listing of all original equip-

ment Trico Wipers for passenger cars and commercial vehicles. Complete illustrated parts information is provided on all cars 1935 to present.

TROUBLE SHOOTING SIMPLIFIED

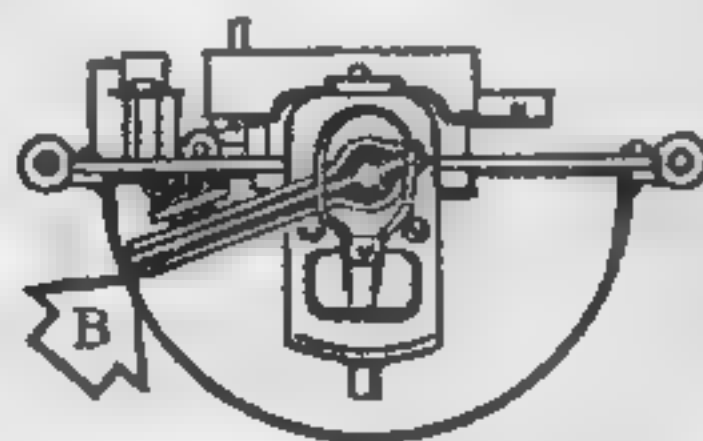

1 WIPER RUNS 1 WAY ONLY

... with engine running — check —

- A. Sticky, broken, or worn valve parts in motor.

- B. Worn piston in wiper motor.

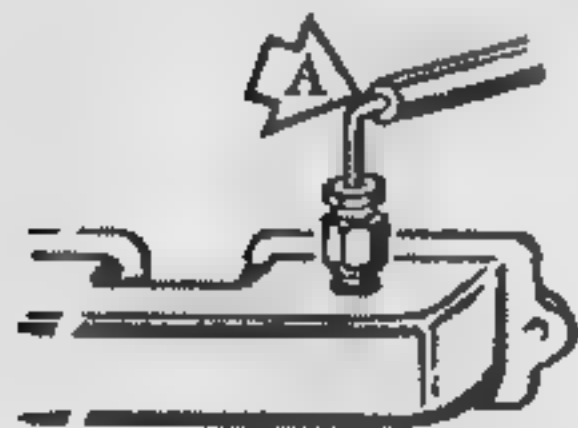

RECOMMENDED SERVICE:

- A. Clean valve mechanism and valve facing. Replace broken or worn parts.
B. Replace with NEW wiper motor. A NEW motor costs little more than a repair job.

2 WIPER RUNS SLOW

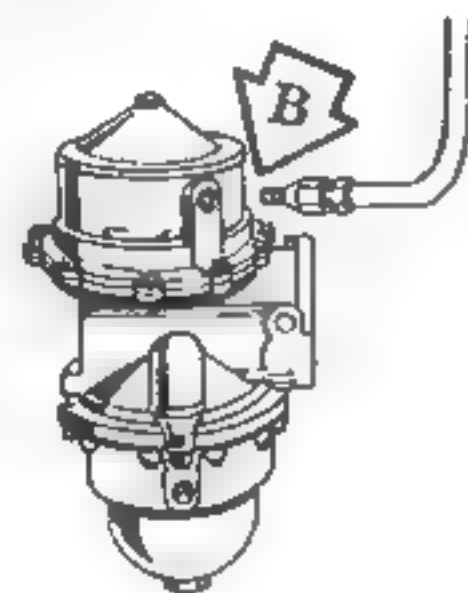

... with engine running — check —

- A. Restricted or leaking vacuum lines or manifold connection plugged with carbon.

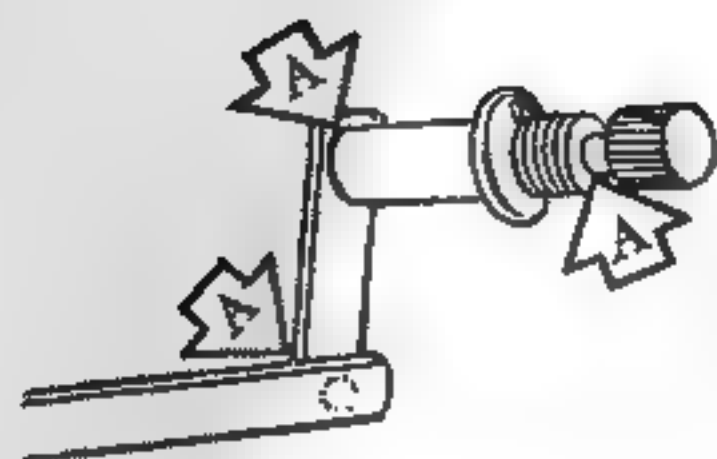

- B. Broken diaphragm in vacuum pump.

To check, remove vacuum line and test for vacuum supply.

RECOMMENDED SERVICE:

- A. Install NEW vacuum lines.
B. Repair or replace vacuum pump.

3 WIPER SQUEAKS

... with engine running — check —

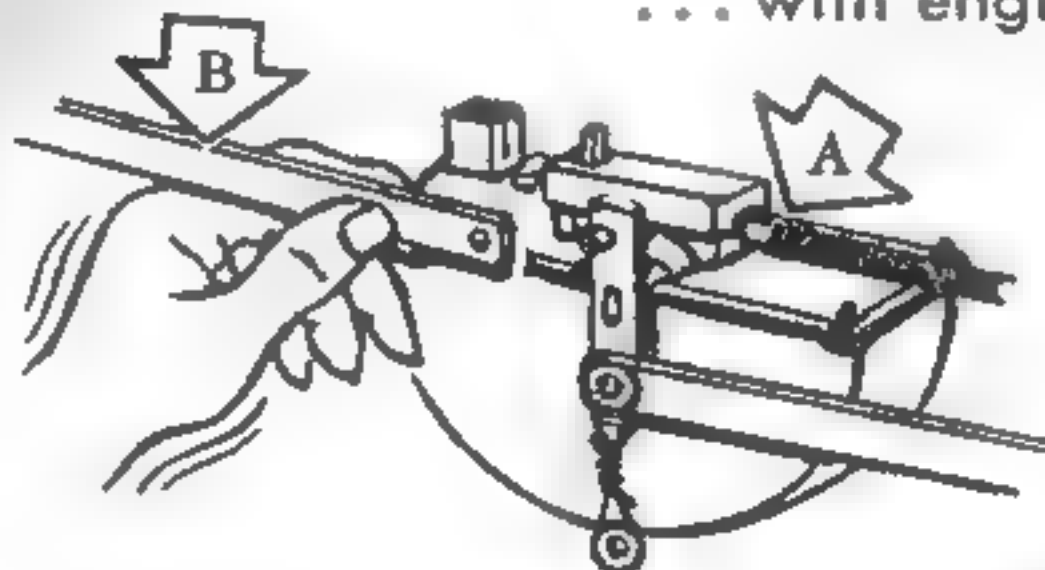

- A. Dry linkage shaft bearing.

RECOMMENDED SERVICE:

Use light penetrating oil on all parts indicated by arrows. Squeaks in linkage operation can be eliminated by proper lubrication at all points specified.

4 WIPER WON'T START

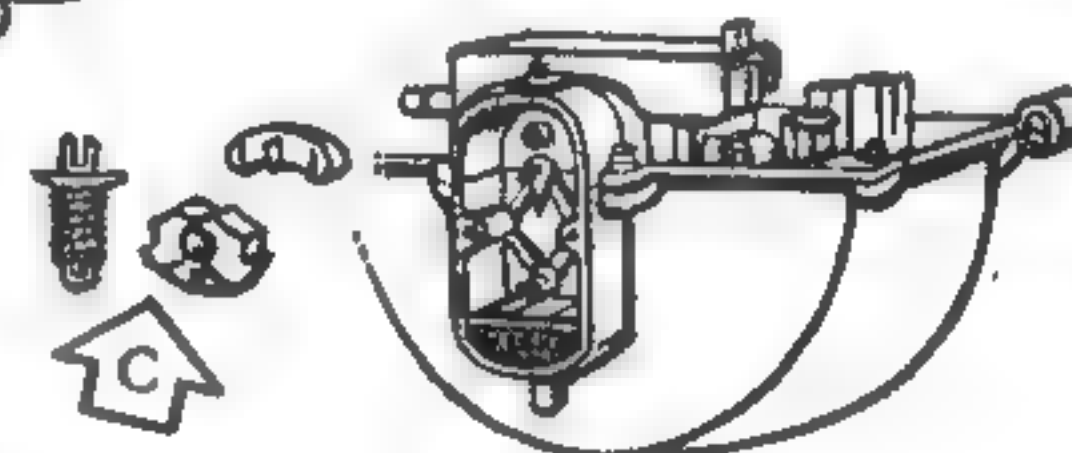

... with engine running — check —

- A. No vacuum at wiper motor.

- B. Bind in wiper linkages.

- C. Broken valve parts in wiper motor.

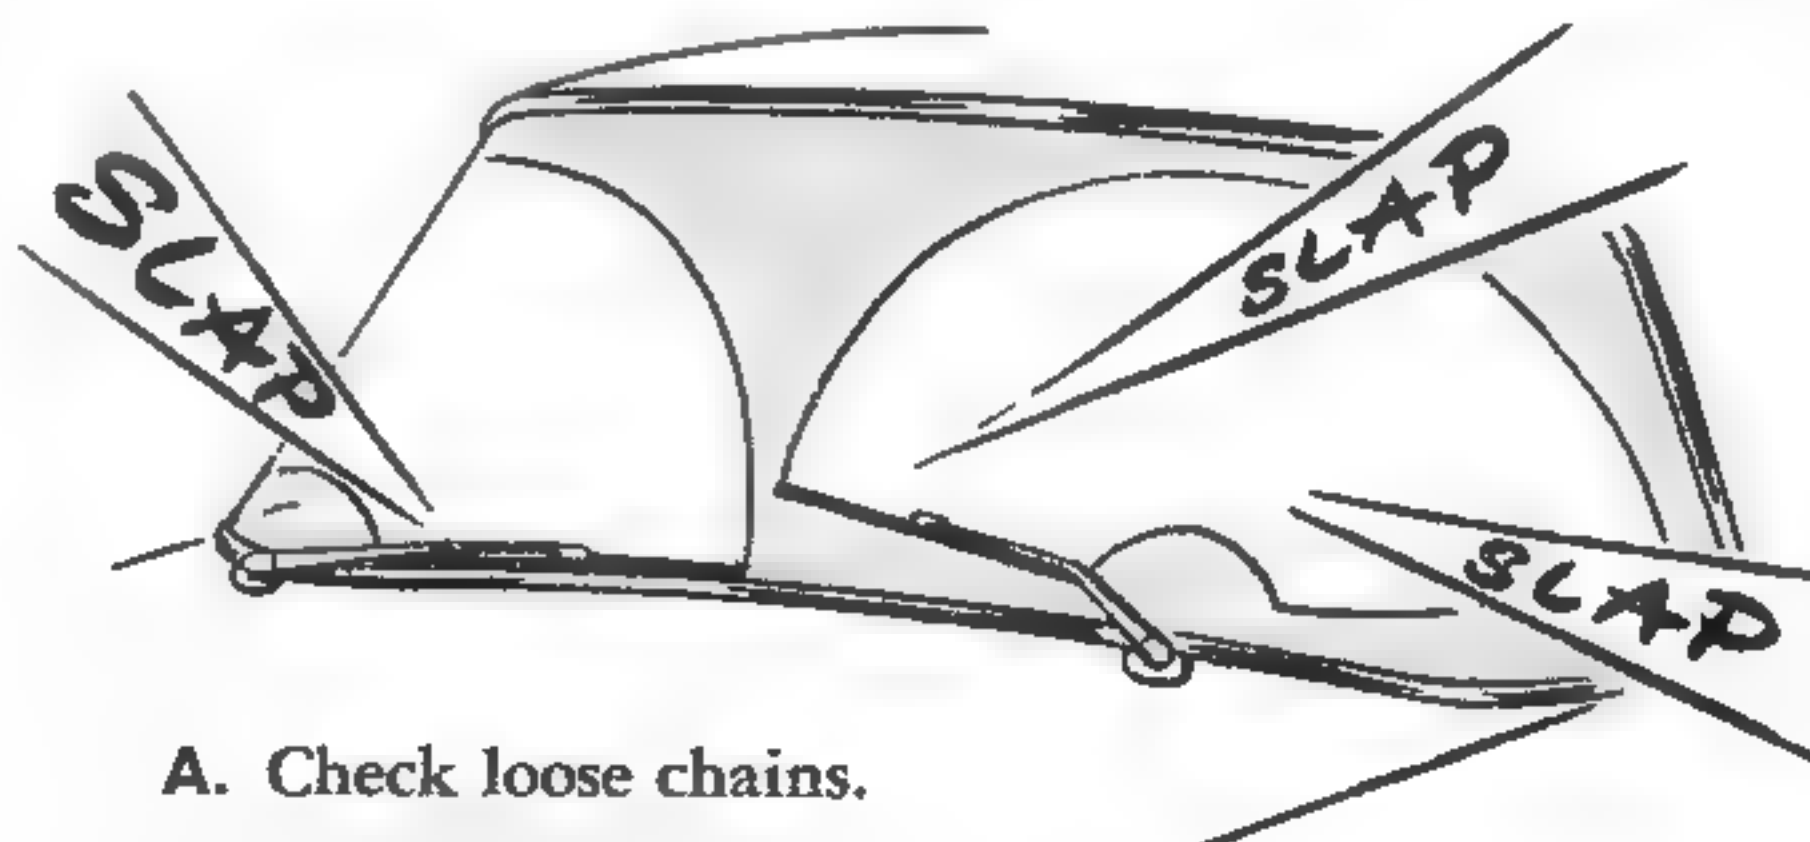

RECOMMENDED SERVICE:

- A. Check vacuum line to manifold ... replace sections broken, kinked or porous.
B. Replace linkage ... use liberal trade-in allowance plan.
C. Clean valve mechanism; replace broken parts.

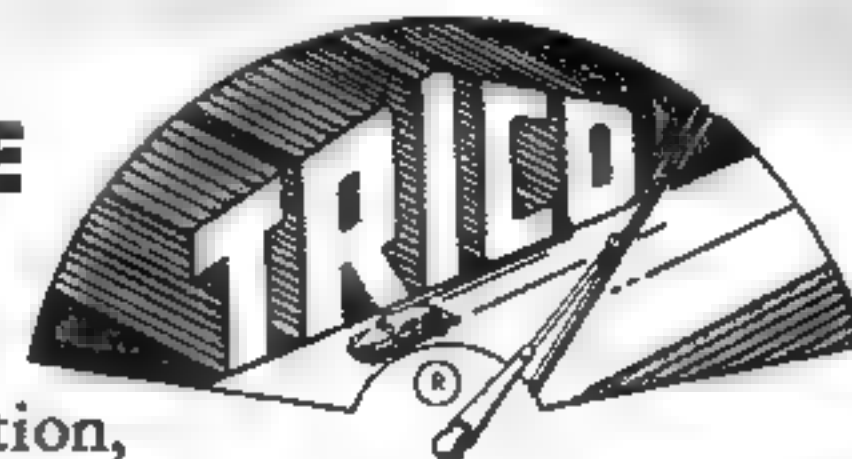

5 WIPER HAS UNEVEN STROKE

(Over Travel or Short Stroke)

- A. Check loose chains.
B. Check loose cables.
C. Arms incorrectly attached.
D. Motor out of position.

WINDSHIELD WIPER MAINTENANCE SERVICE

43

RECOMMENDED SERVICE:

- Reposition lower segment and take up slack in chains. If badly worn, replace with new linkage.
- Reset cable tensioners to take up slack in cable. See pages 43 and 44.
- Remove wiper arms — turn wiper to parked position — reinstall arms in correct parked position.
- Loosen motor attachment screws — start wiper — turn to parked position — motor will auto-

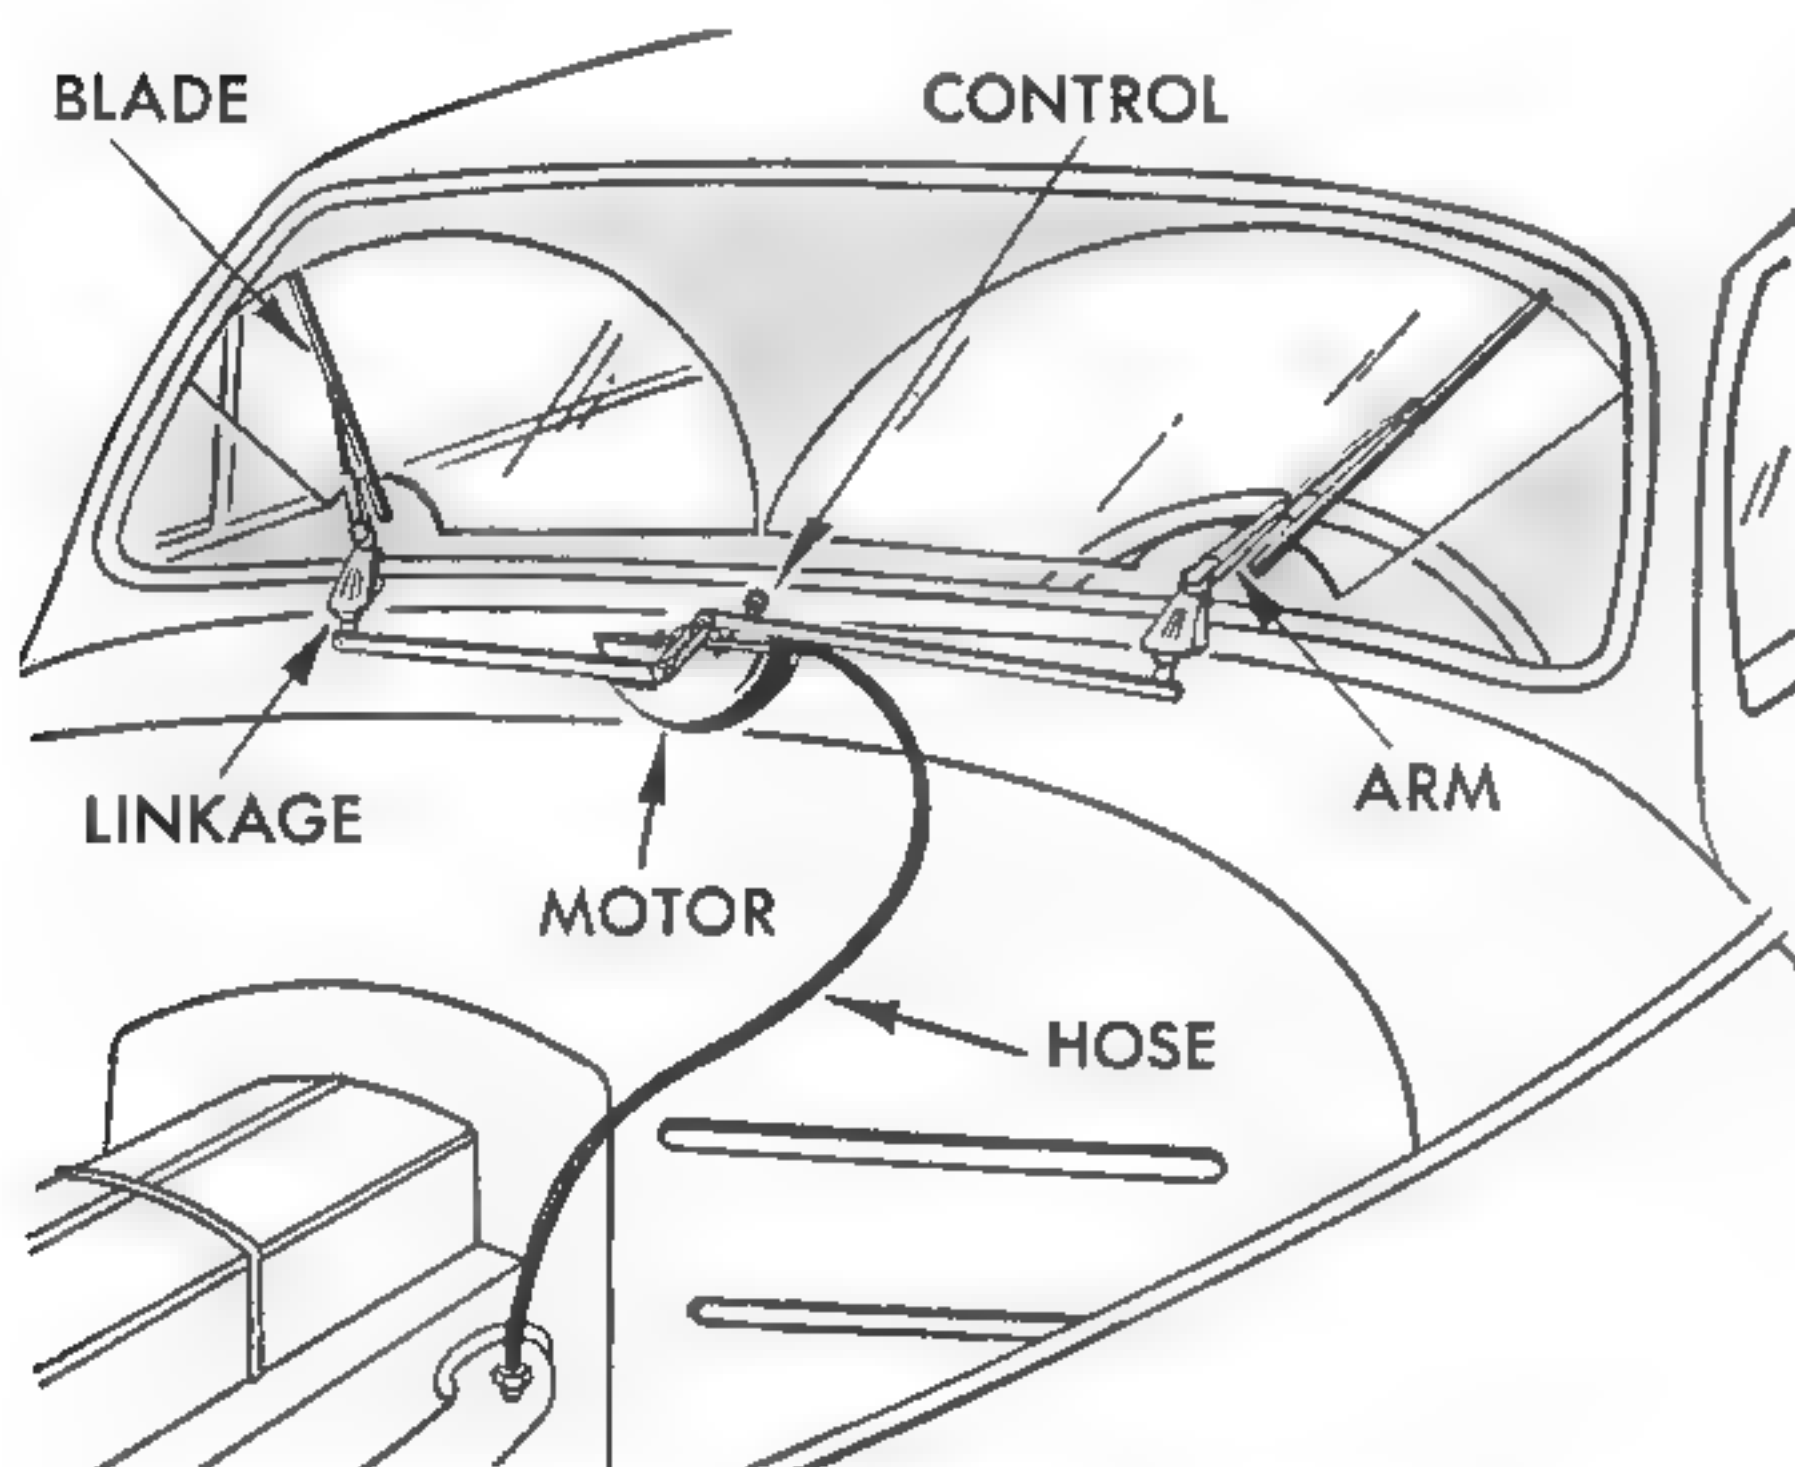

matically locate in correct mounting position, then tighten attachment screws.

6 WIPER SLOWS DOWN — AT CENTER OF STROKE

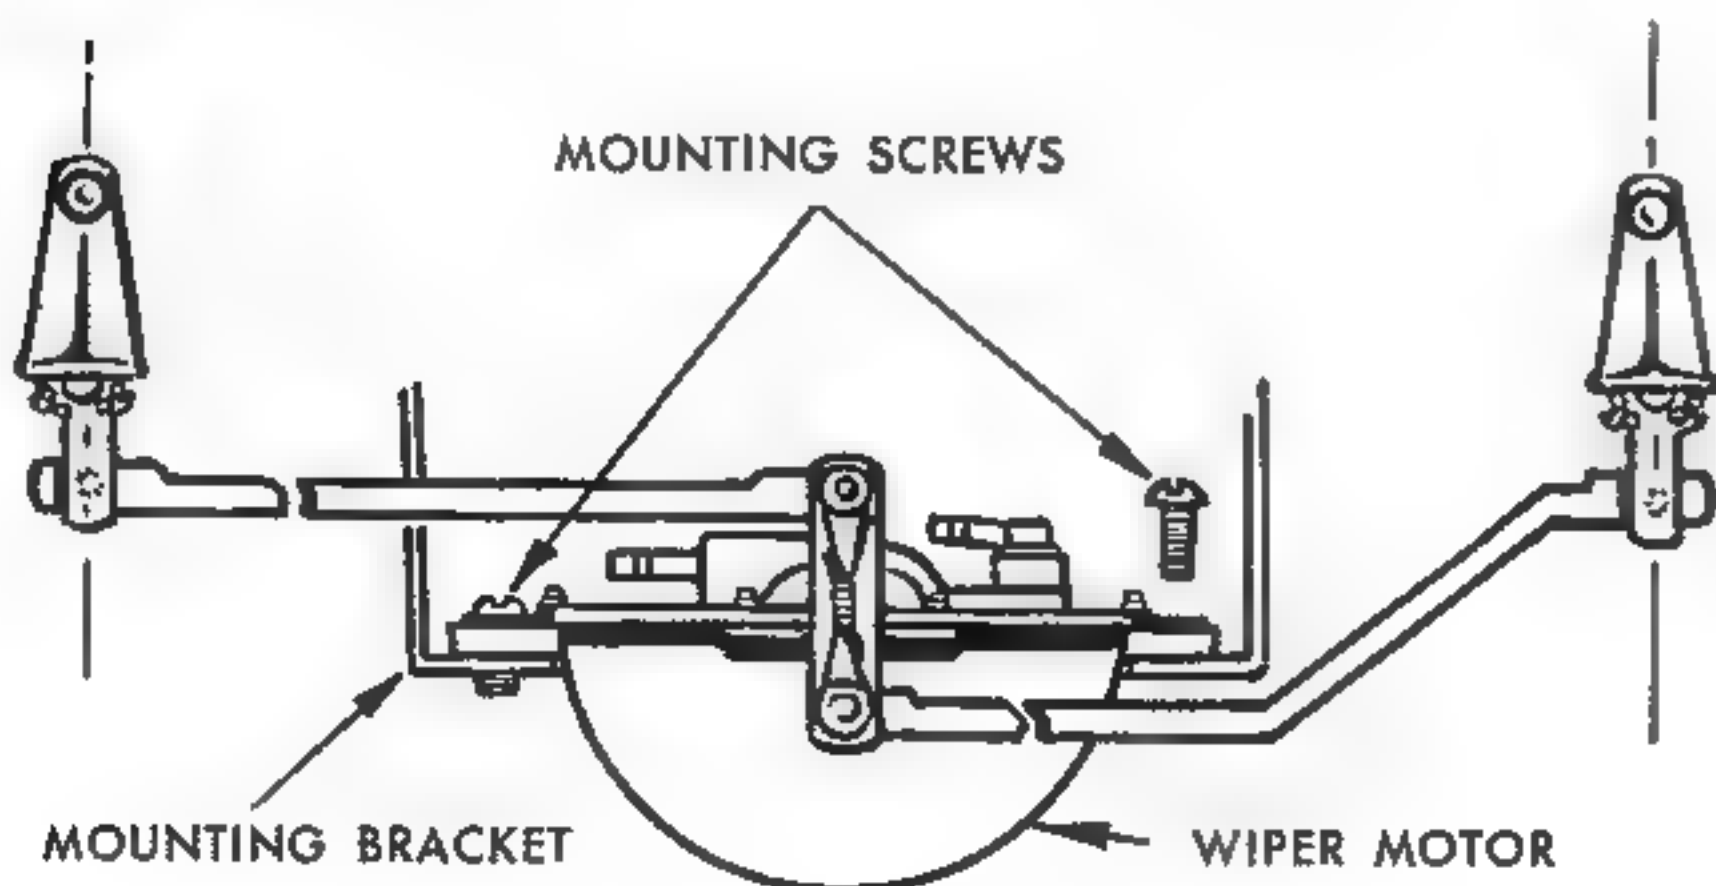

For complete service information on adjustment of Cables with Built-in Torsion Spring take-up, see pages 43 and 44.

SYNCHRONIZED WIPER OPERATION

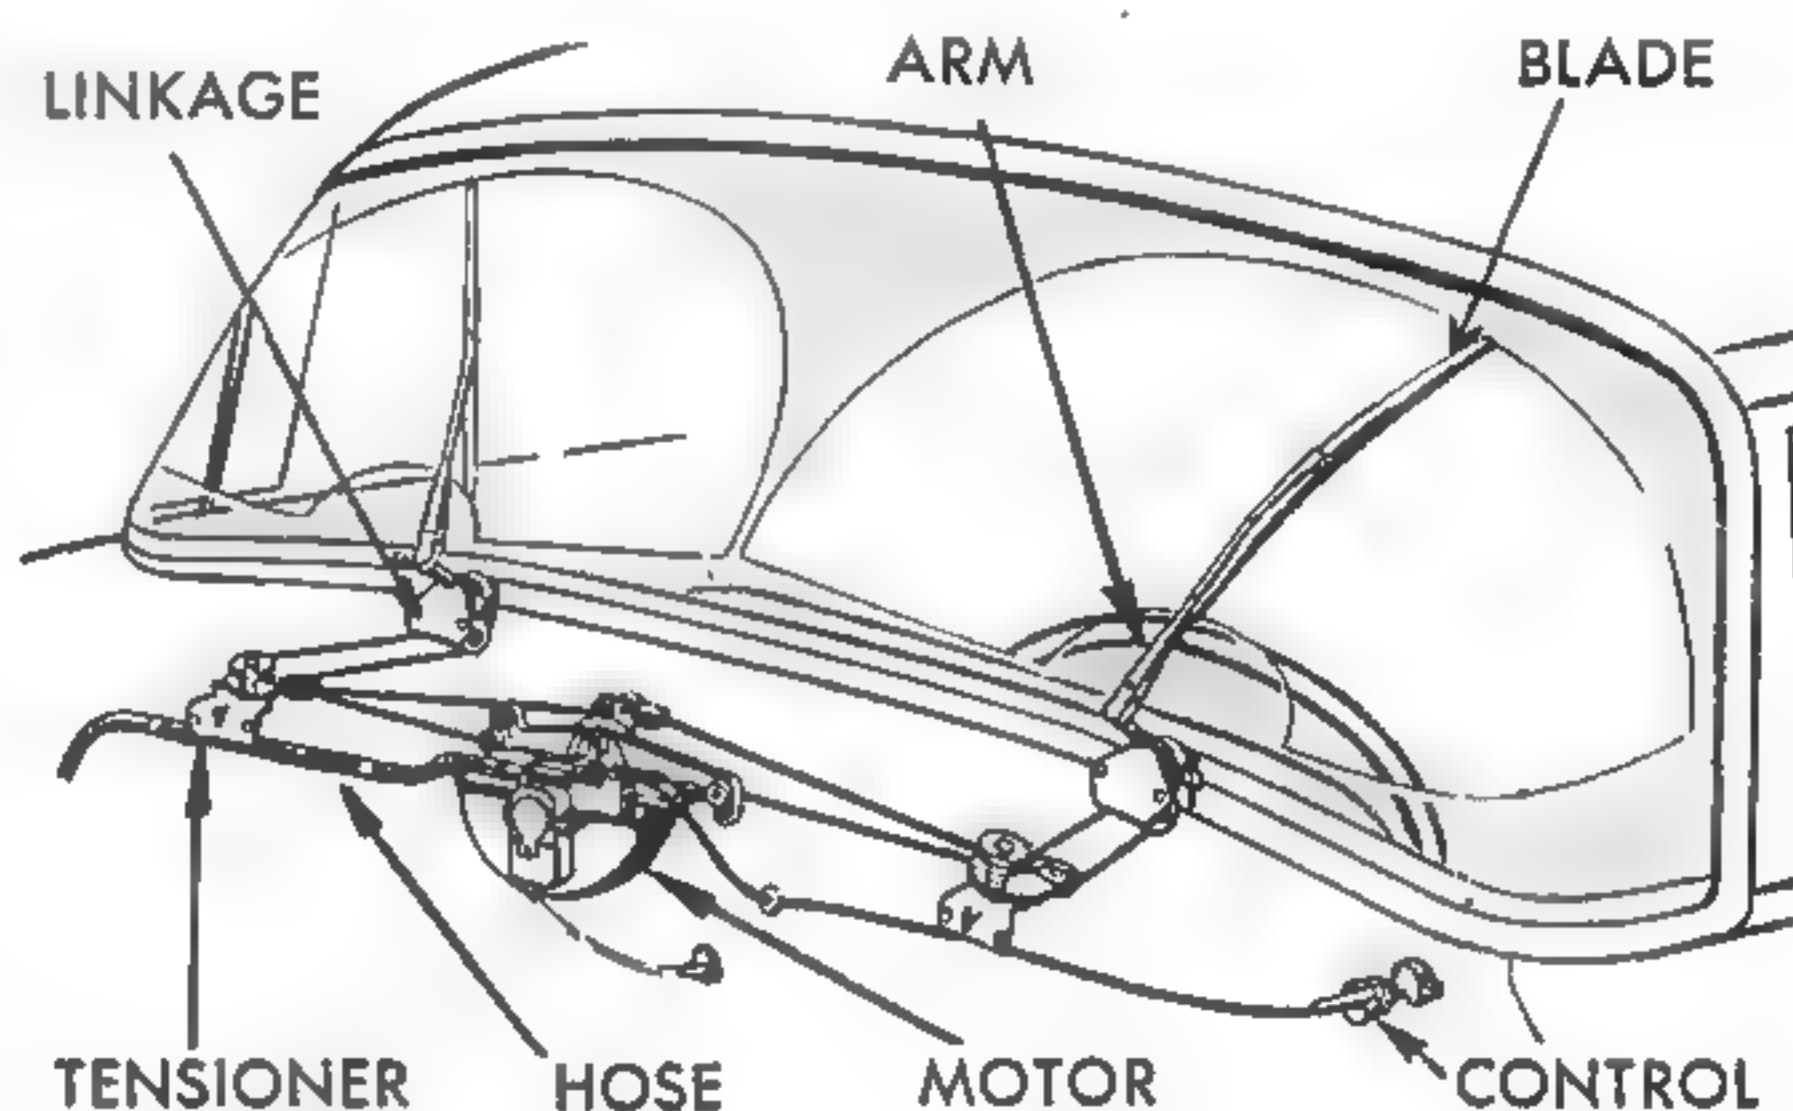

VACUUM WIPER MOTOR USED WITH GEAR, CHAIN, OR PIVOT LINKAGES

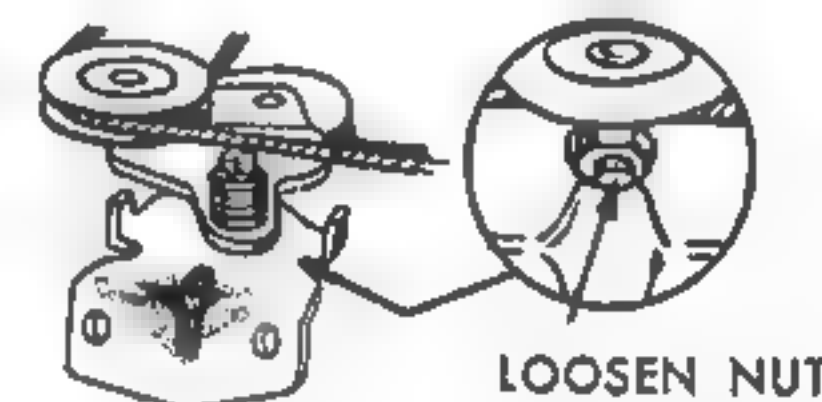

1. Install linkages and tighten attachment screws.
2. Reinstall motor but do not tighten screws.
3. Attach linkages to motor.
4. **IMPORTANT:** To obtain correct alignment, follow this procedure: With linkage arms connected to wiper motor, set the linkage drive levers in a vertical position (see illustration); then tighten the motor mounting screws; start the car engine; turn wiper off, and permit the wiper to automatically assume the parked position before installing wiper arms.
5. With wiper motor off ... install arms and blades in parked position. Note: In normal wiper operation if wiper slaps or stroke is too short, follow service procedure recommended in step No. 5. page 42.

VACUUM WIPER MOTOR USED WITH CABLE DRIVEN LINKAGES

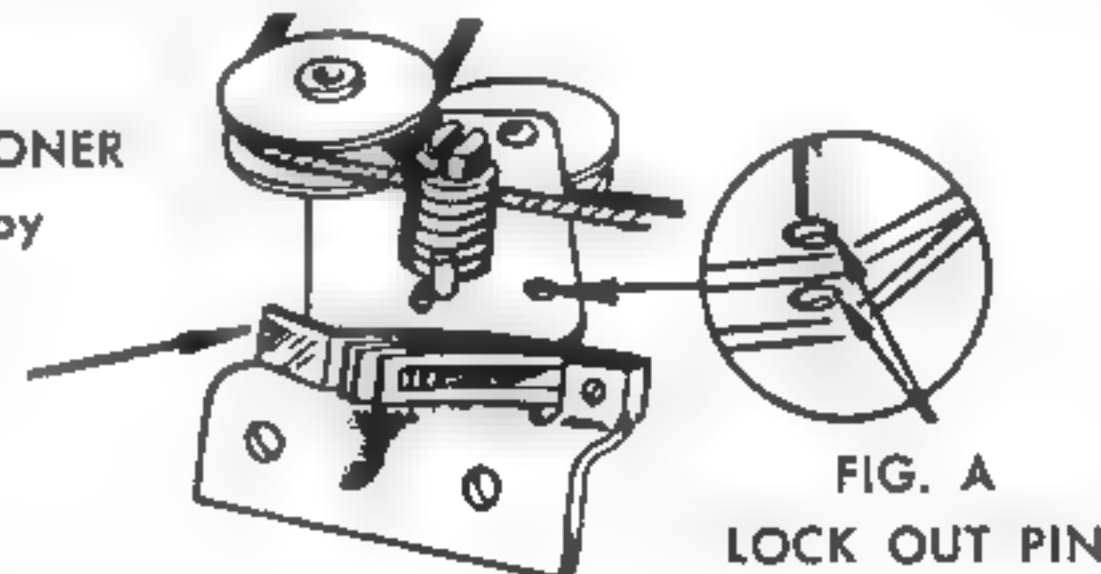

TYPE A TENSIONER
(identified by tension lock nut)

For proper adjustment of Type "A" tensioner, loosen nut and tap stud lightly to unseat lock washer. This permits the cable tensioner to automatically take up any slack in the cables. Re-tighten the nut firmly to hold the pulleys in the new position. Each tensioner must be adjusted separately. Check to see that cable runs in center of pulley groove.

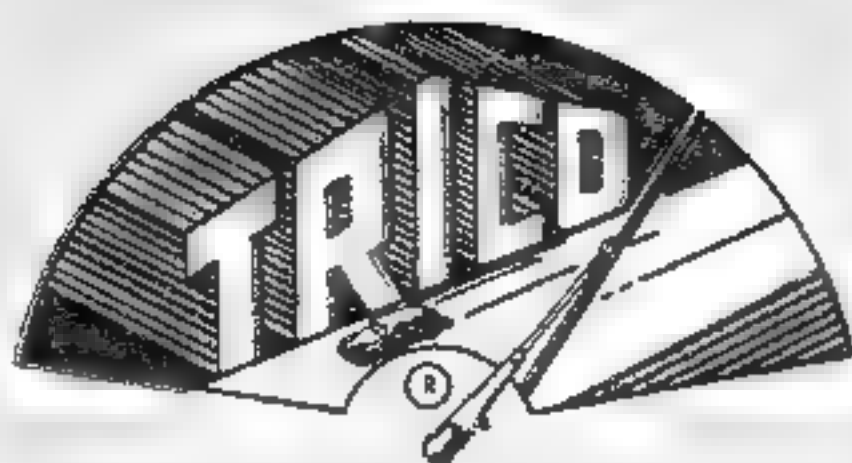

TYPE B TENSIONER
(identified by ratchet locking spring)

Type "B" tensioner provides for automatic take-up of any slack in the cables. No adjustment required. To remove or reinstall cables, release ratchet locking spring from ratchet teeth with finger pressure and manually move tensioner toward center of car to relieve pressure on cables.

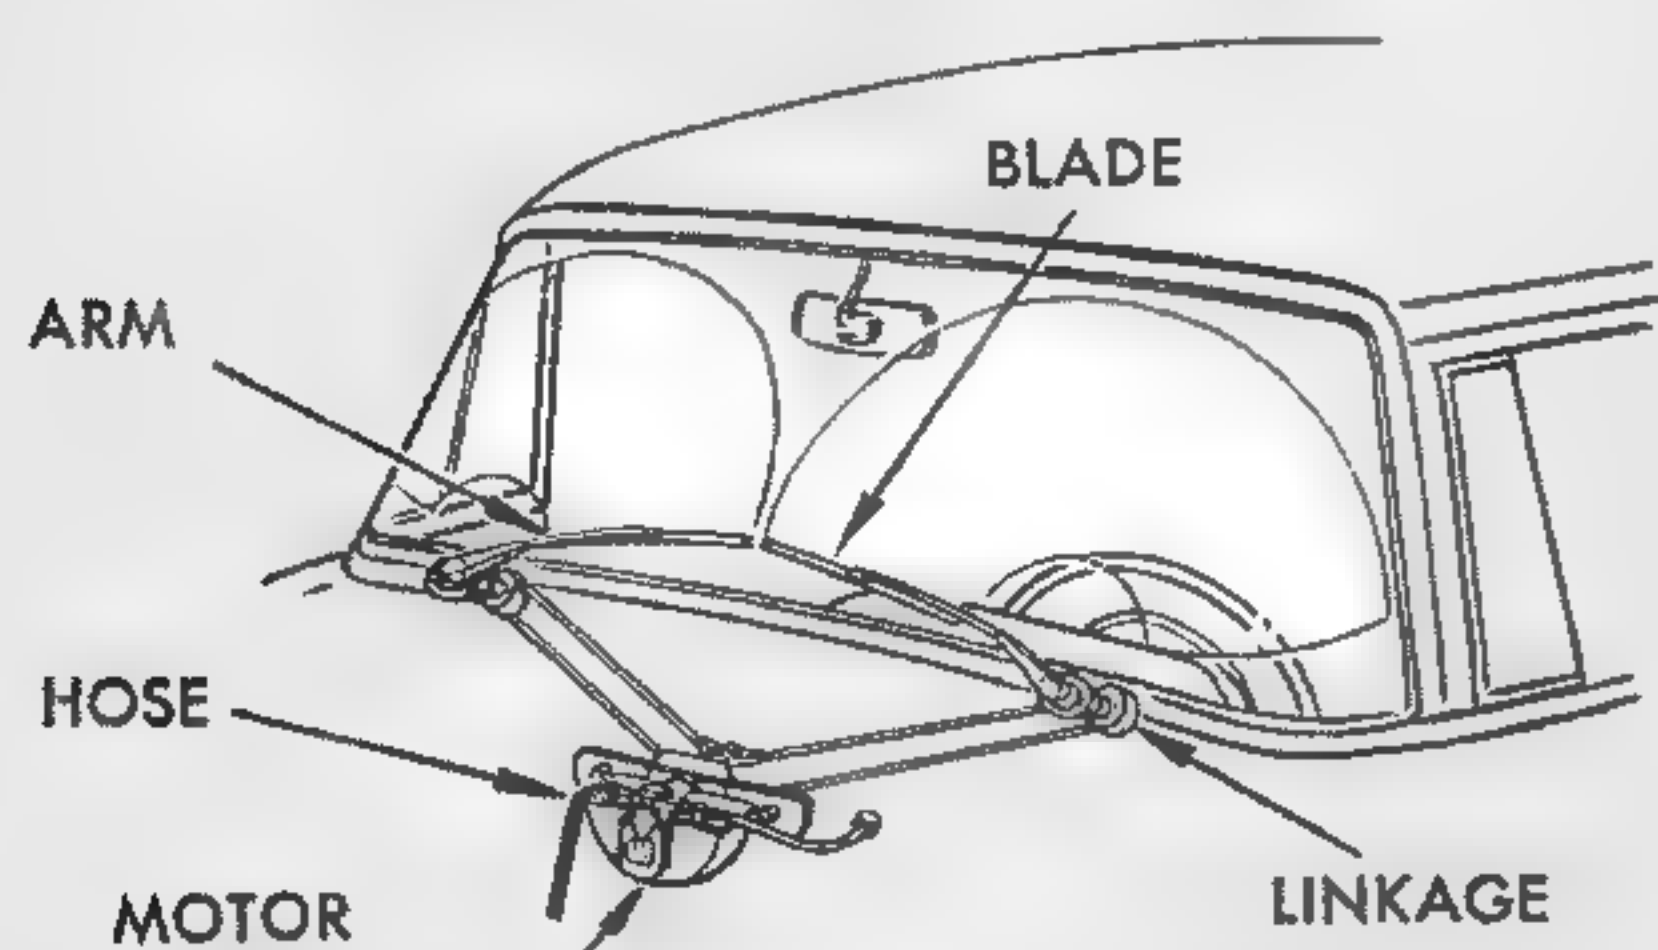

New ratchet type tensioners as supplied by factory are assembled with a lock-out pin (fig. A) which must be removed after tensioner is installed to permit automatic take-up of cables.

After installing tensioner check to see that cable runs in center of pulley groove.

WINDSHIELD WIPER MAINTENANCE SERVICE

VACUUM WIPER MOTOR USED WITH
CABLE DRIVEN LINKAGES HAVING
BUILT-IN TORSION SPRING TAKE-UP

Built-in Torsion Spring take-up permits simplified cable tension adjustment.

CABLE ADJUSTMENT PROCEDURE

Wiper slow down at center of stroke indicates cables are too tight; proceed as follows:

1. Move the wiper arms by hand up into the center of the arc, midway between the two extremities of travel. See Fig. 1. With arms in this position, motor drive lever should be in vertical position. **IMPORTANT:** Make sure motor drive lever remains in vertical position during all steps of adjustment procedure. See Fig. 1A.

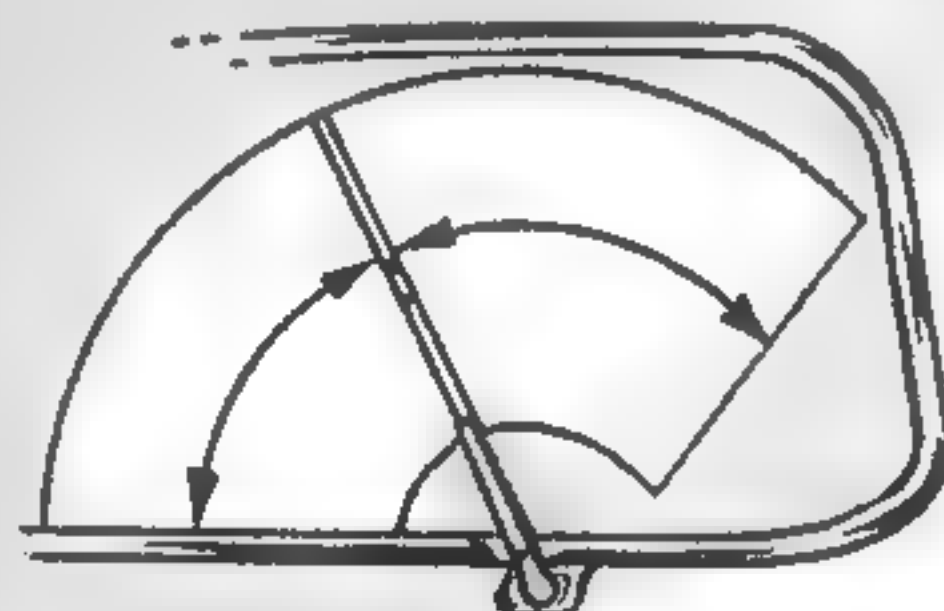

FIG. 1

DIAGRAM SHOWING HOOK-UP OF CABLE ENDS TO DRIVE LEVER DRUMS

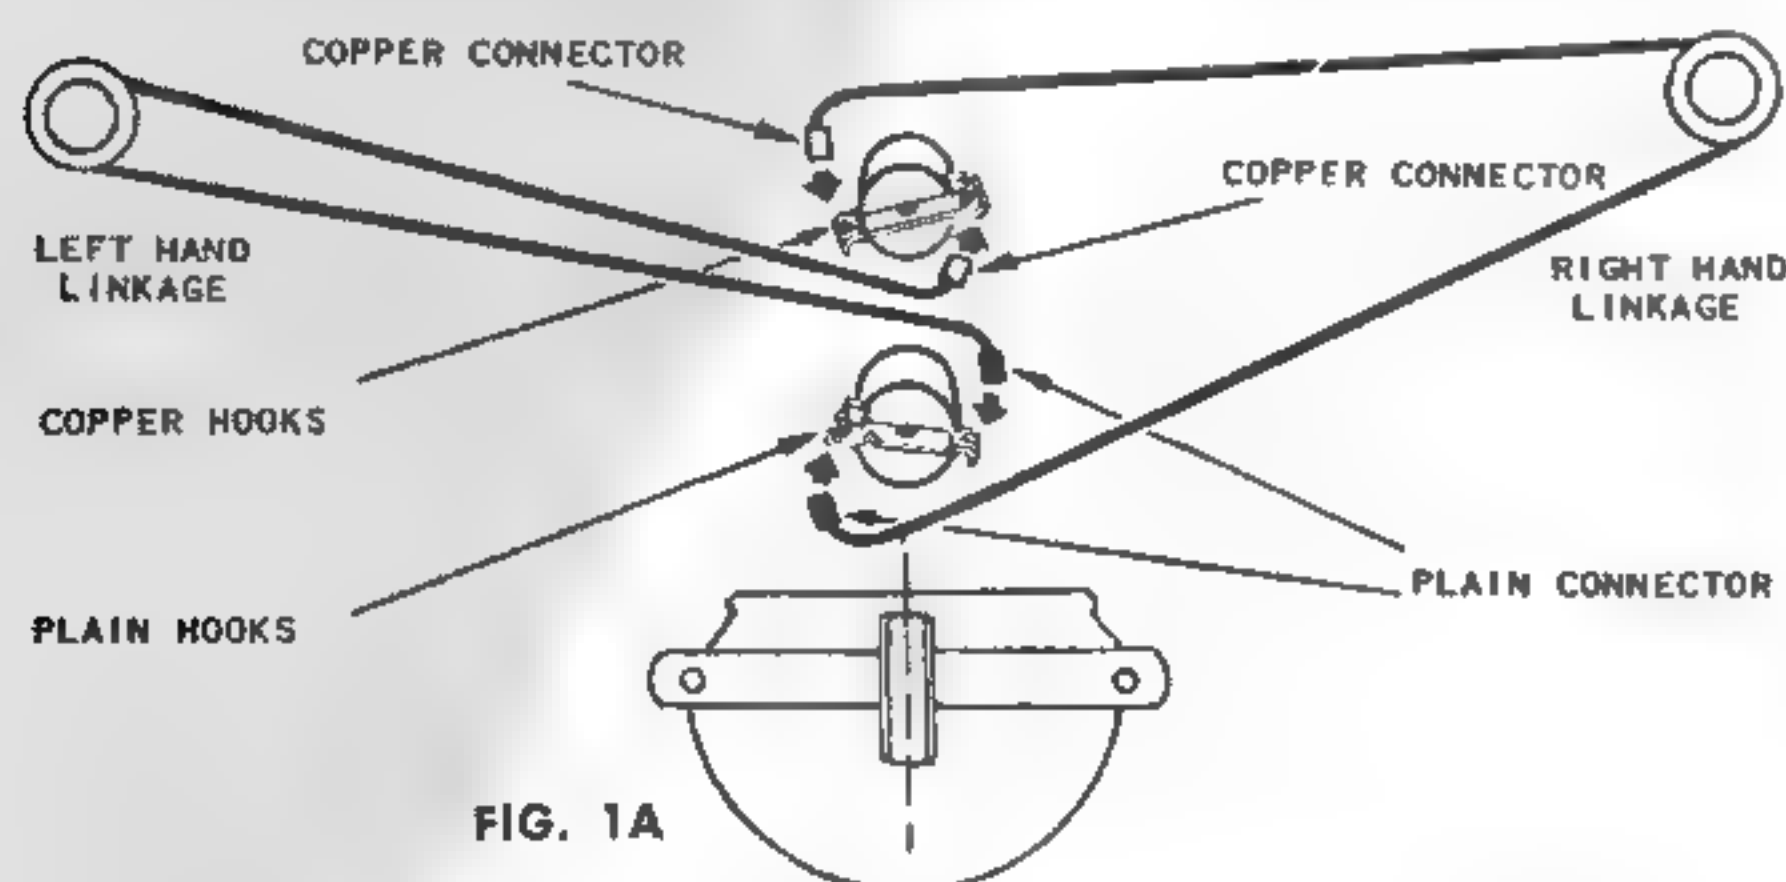

FIG. 1A

2. While the arms are in center position, remove the arm to reach the tensioning locking screw in the end of the shaft. Do not alter position of shaft.
3. Loosen the screw and give it a full turn beyond its loosened position. Tap the screw end. See Fig. 2. and allow the spring take-up to properly adjust the cable loading.

FIG. 2

FIG. 3

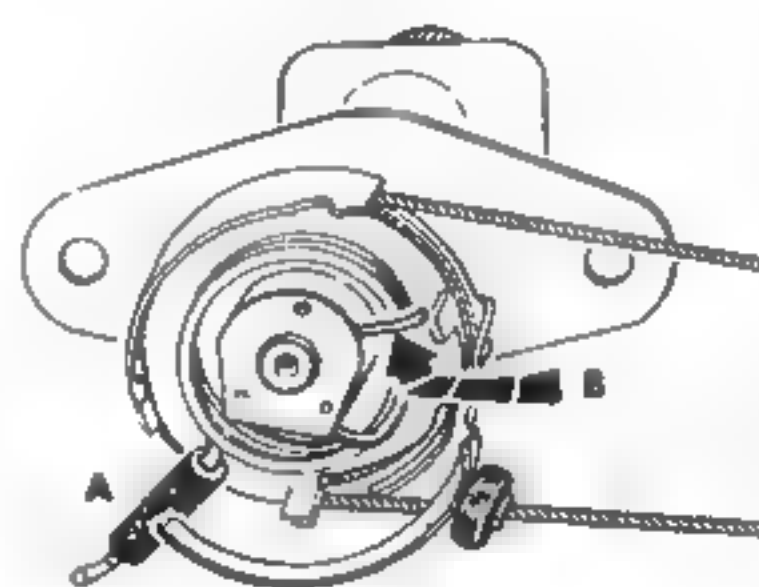

On late model 1953 cars and subsequent production no screw is located in end of shaft. To retension cables, press knurled driver (fig. 3) to allow spring take-up to automatically adjust cables.

After tensioning as above indicated, turn wiper on ... then off ... to allow wiper to park under its own vacuum. Reinstall the arms and blades in the parked position.

CABLE REMOVAL PROCEDURE

Release tension by loosening screw in shaft (fig. 2) or push in on driver (fig. 3). Hold this position, reach under dash and pull cables to produce a slack. Tighten screw (fig. 2) or release driver (fig. 3) to hold cables in slack position. Disconnect cable end at motor drive lever or drum.

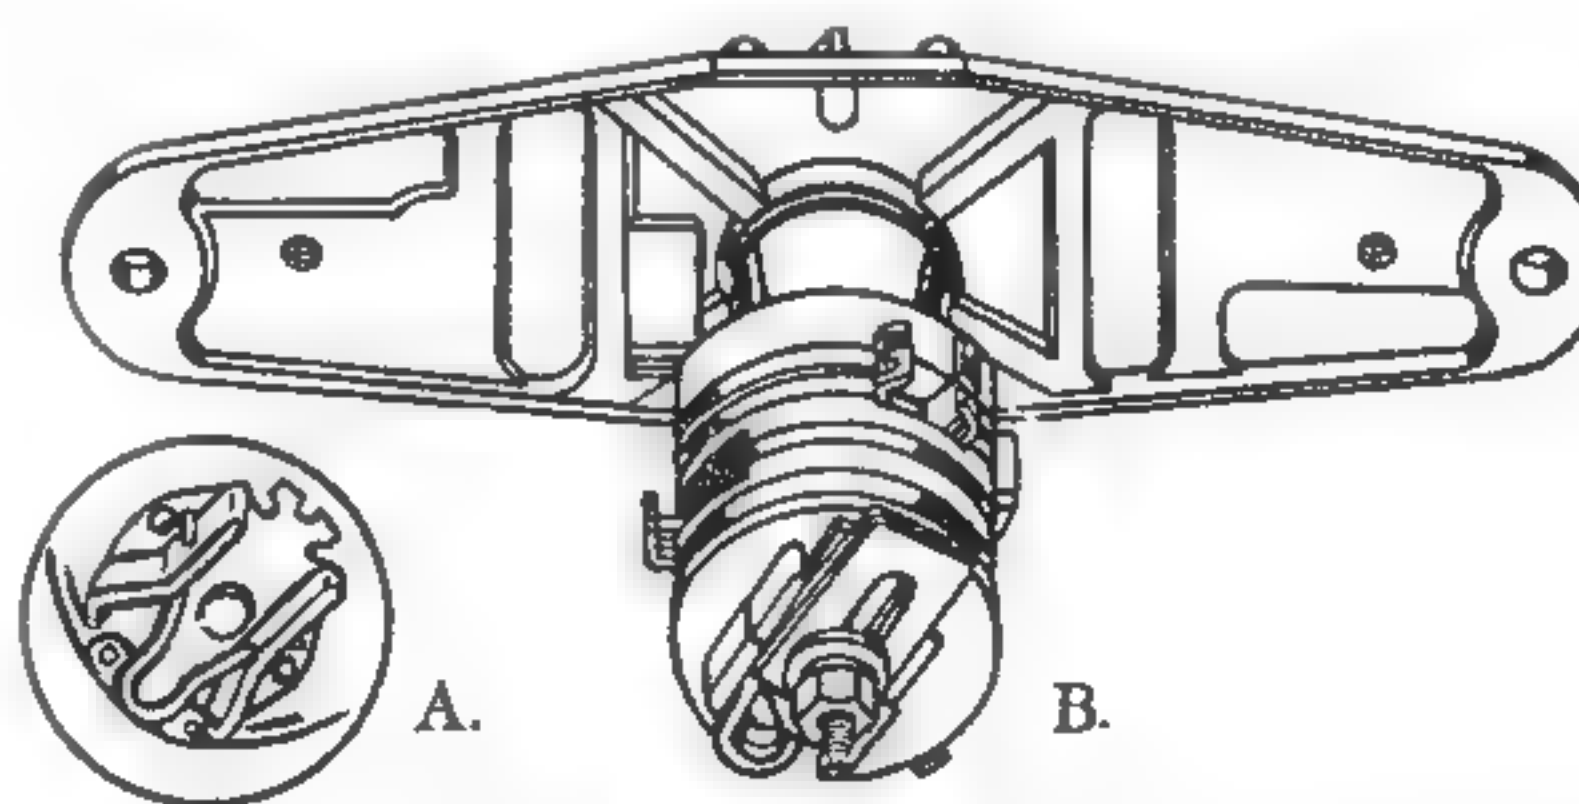

CABLE EQUALIZER SPRING

The correct position of the equalizer spring when the arms and blades are in parked position shown at (A).

To reset equalizer spring assembly, remove from linkage shaft by applying pressure on lock spring as shown (B). Reset to correct position.

CENTRALIZED CABLE TENSIONERS

Centralized cable tensioners, first used on 1956 Lincoln and later production of Ford and Mercury cars, provide a simplified retensioning procedure at the motor drive drum.

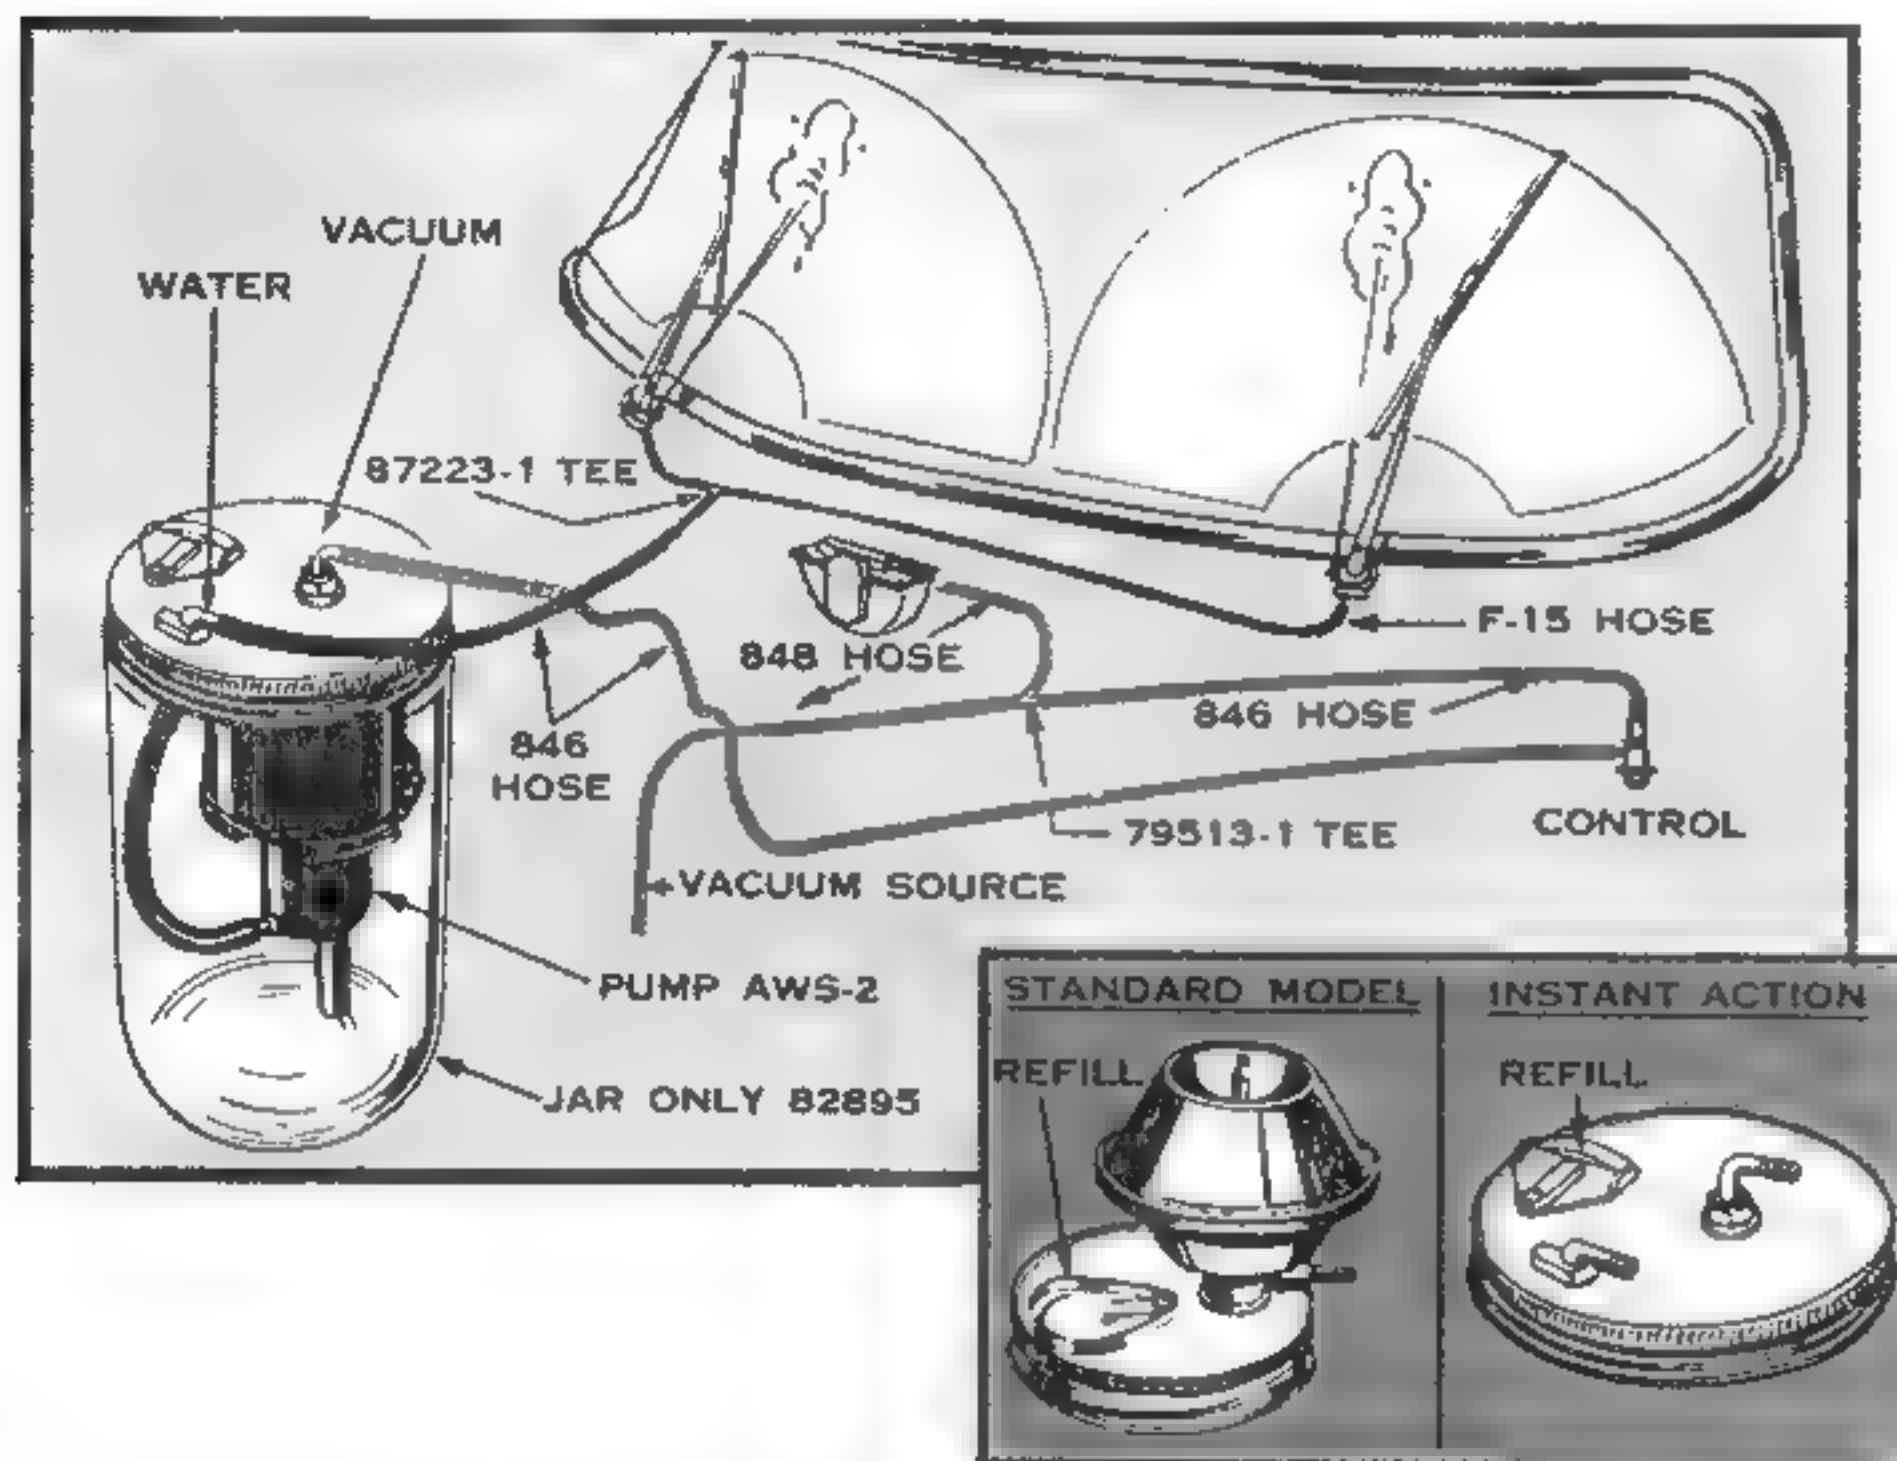

Two types are furnished as original equipment, type "A" illustrated above, provides automatic spring pressure to tension cables. Type "B" holds cables at proper tension through a lock nut. Complete installation and tensioning instructions are provided by year, make, and model of car in DM-3000 Specification Manual.

WINDSHIELD WASHER CHECK

GENERAL INSTRUCTIONS

All checks to be made with car engine running and adequate water supply in jar.

1. **CHECK VACUUM** ... Remove vacuum line from washer pump. Hold finger over end of hose ... press control button if no vacuum, check hose line, tee connections and control. If vacuum is O.K. proceed to next step.
2. **CHECK WATER AT PUMP** ... Remove water hose at pump. Press control button. If pump fails to deliver water this may be due to internal clogging ... calcium deposits from hard water or the use of spurious solvents. If water squirts from pump ... reinstall hose and proceed to next step.
3. **CHECK WATER AT NOZZLES** ... Remove nozzles ... press control button. If water flows from nozzle port, clean or replace nozzles. If no water appears, check for clogged or broken hose.

4. **NOZZLE ADJUSTMENT** ... Insert nozzle finger tight. Press control button and tighten nozzle until water stream hits windshield about 2" or 3" below top of wiper arc.

Instant Action WASHER

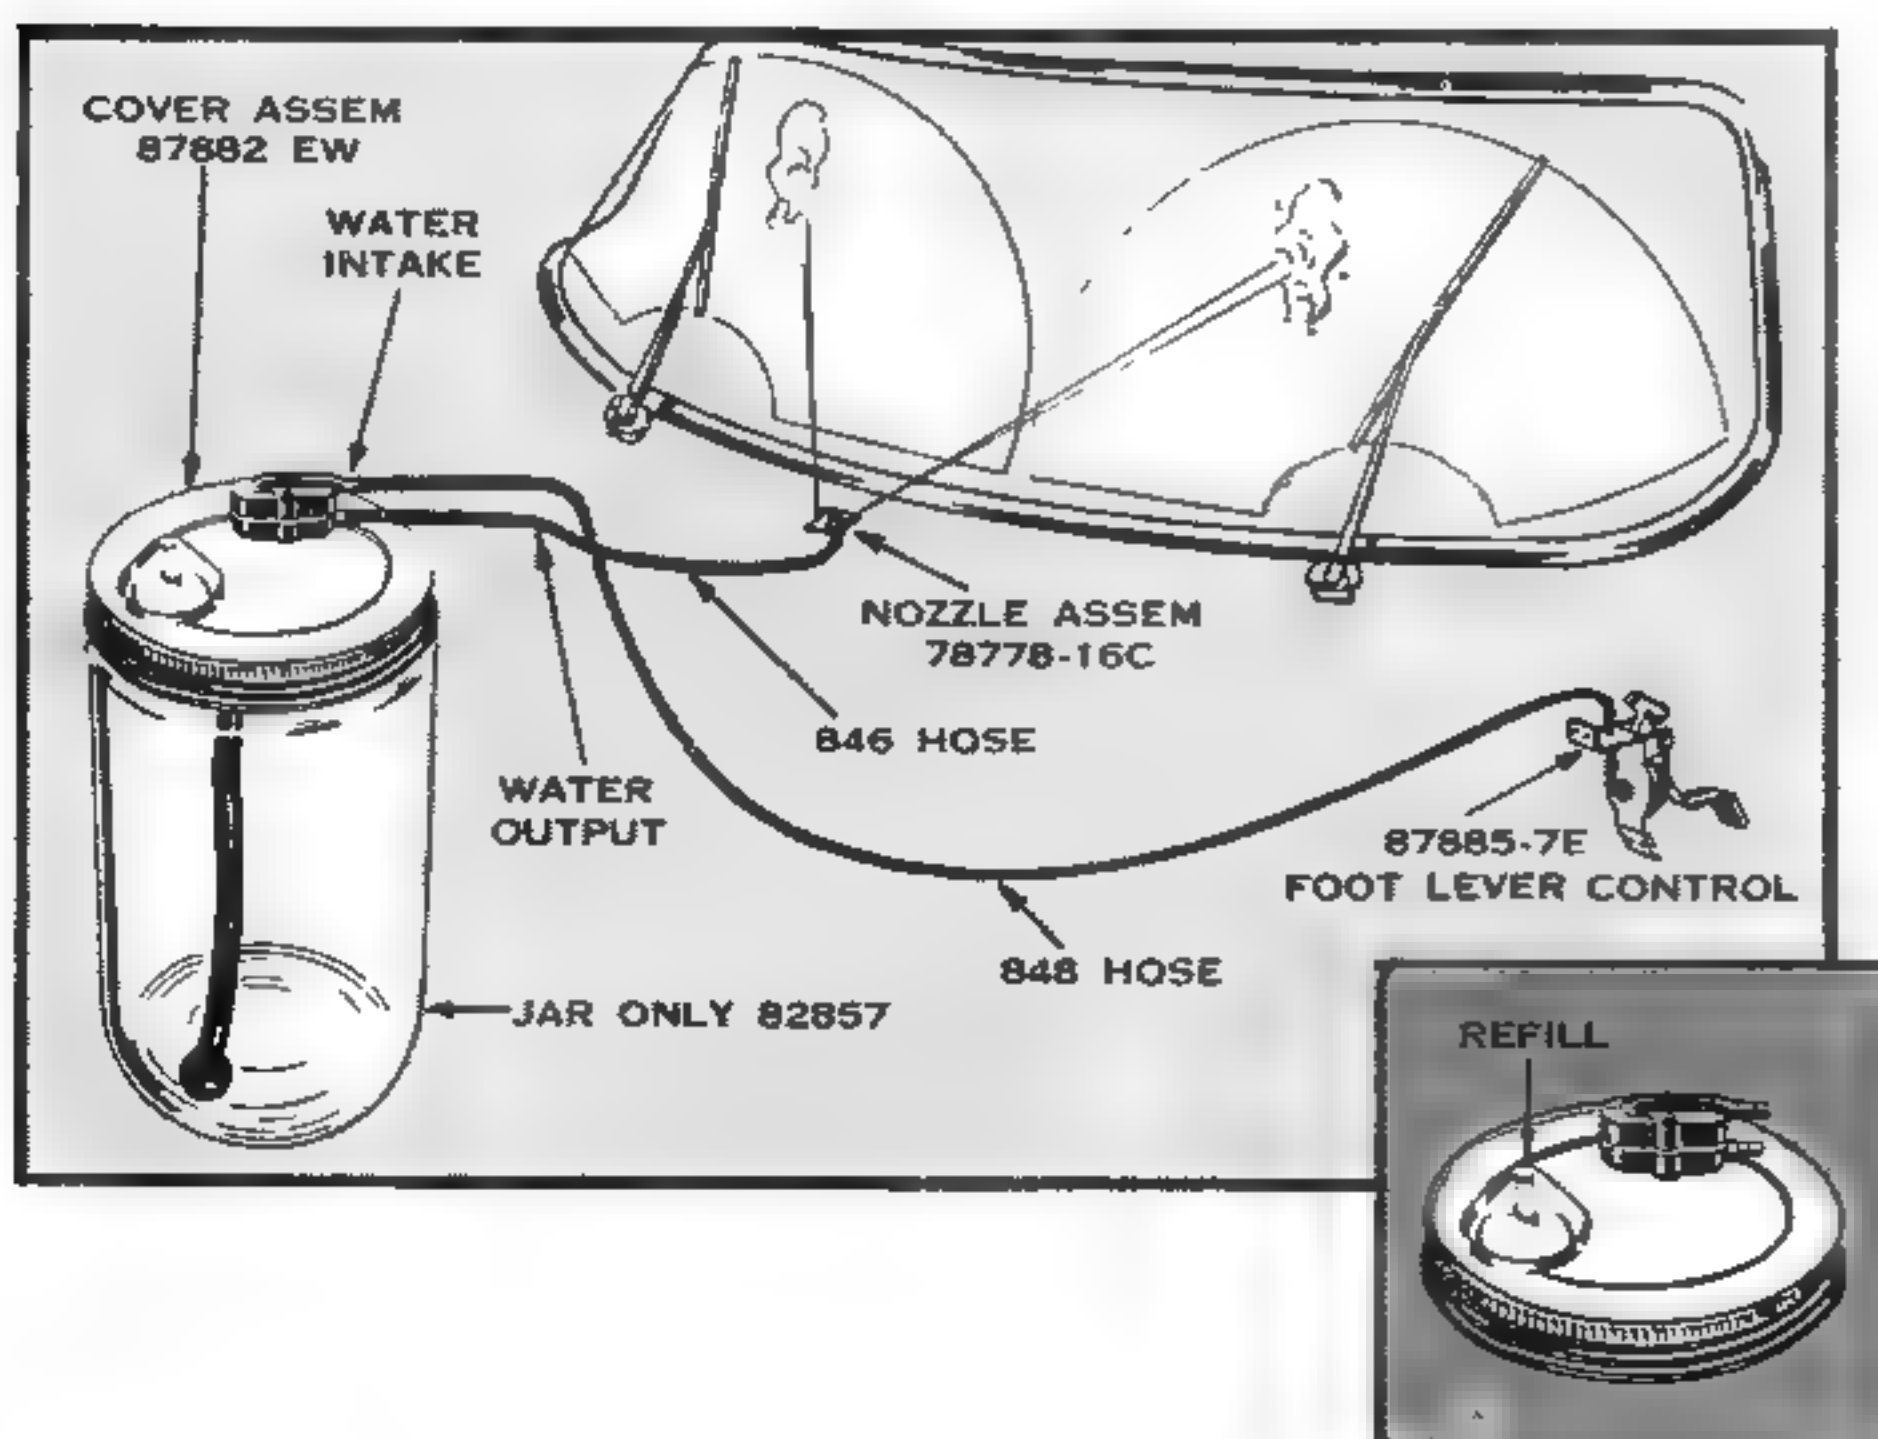

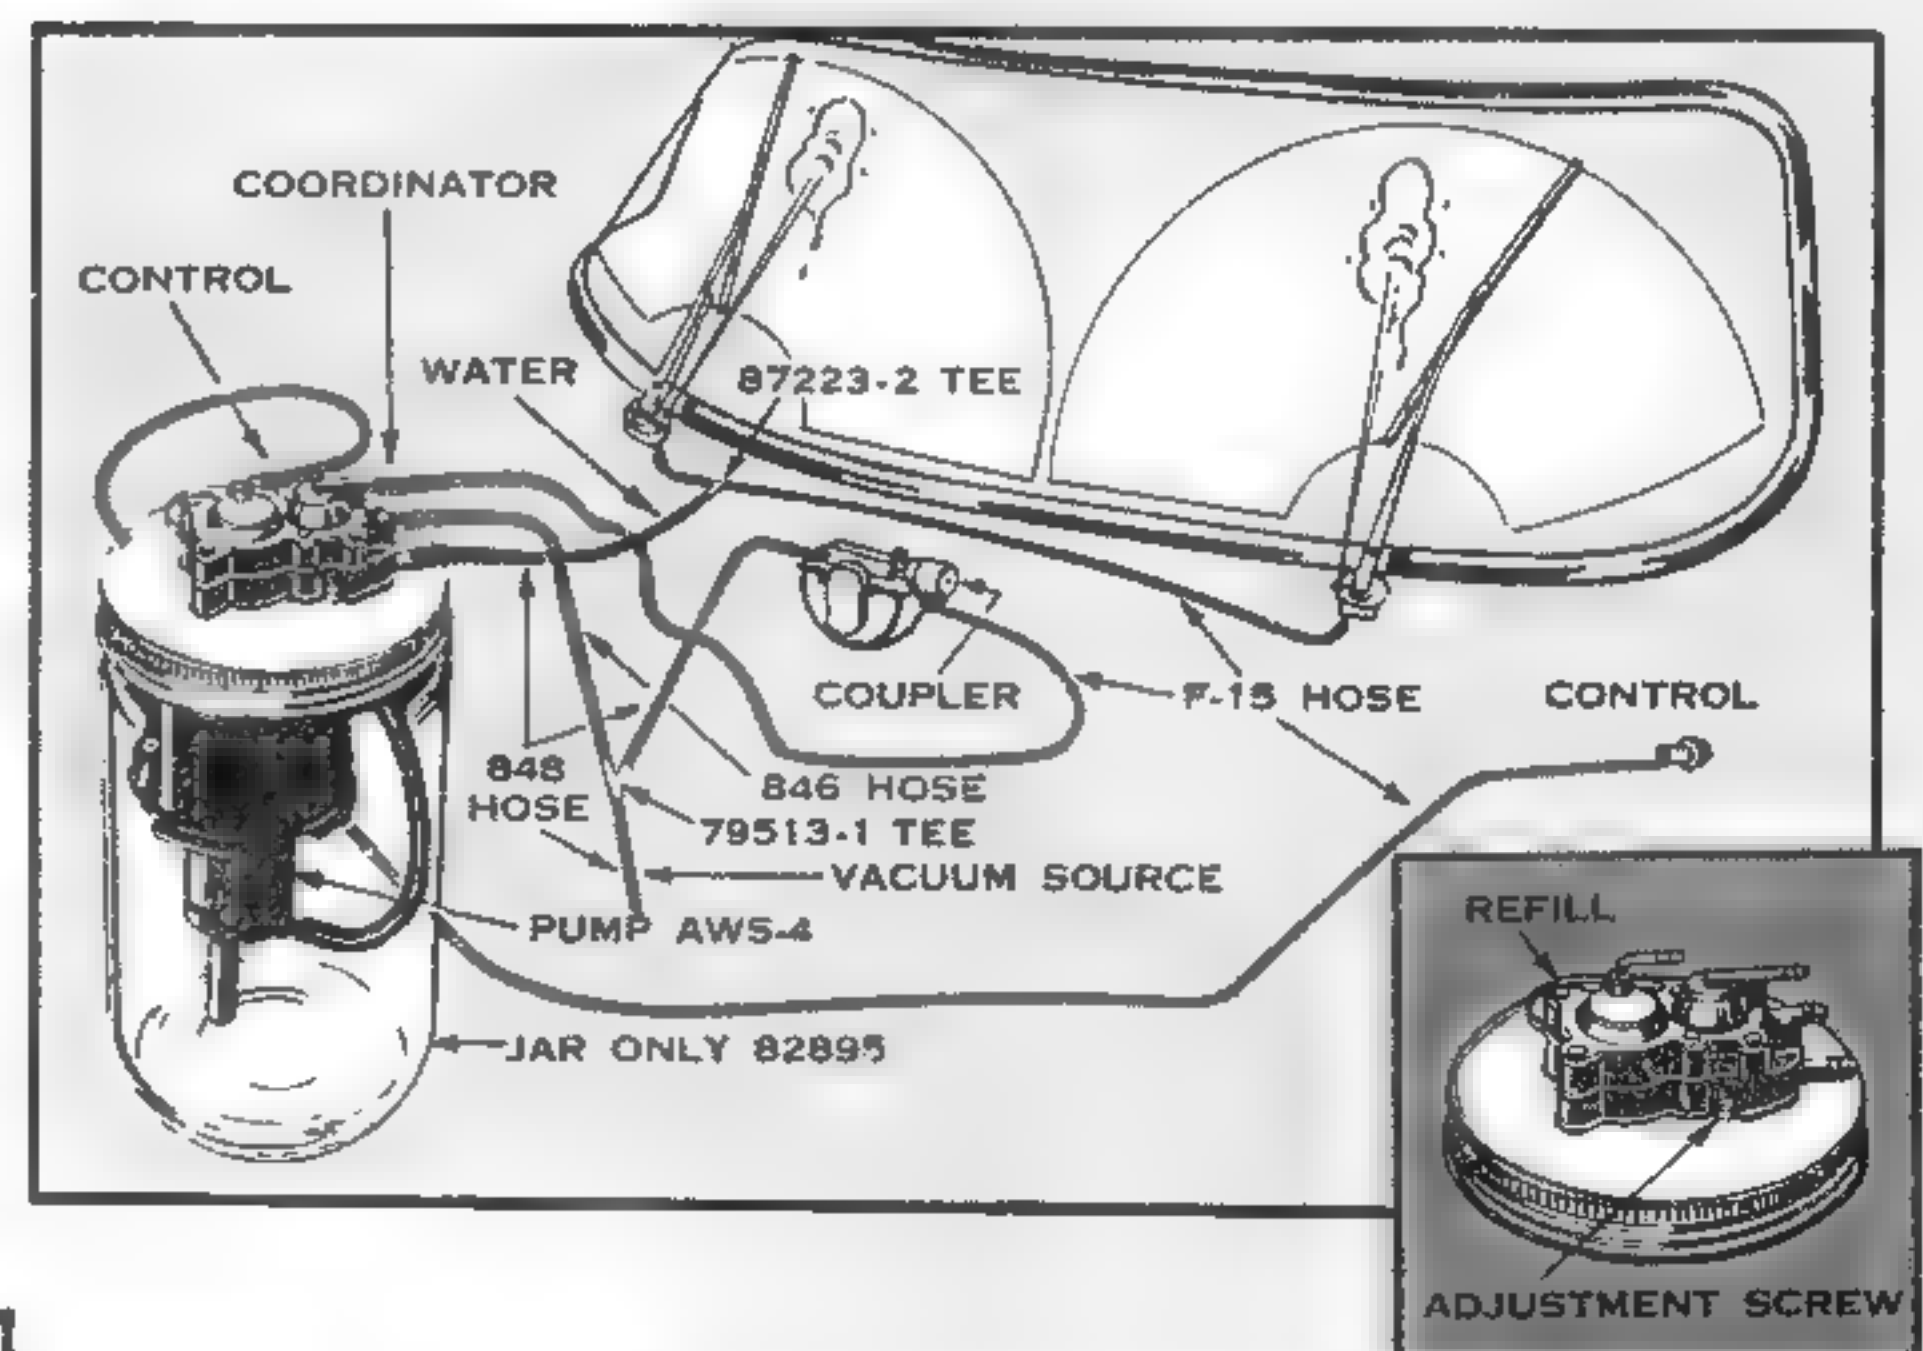

To check follow the four steps outlined under general instructions.

NOTE: When servicing the STANDARD MODEL ... if check shows the pump to be inoperative, service with INSTANT ACTION PUMP and JAR. This will fit present bracket assembly.

Coordinated WASHER

To check follow general instructions.
Special instructions follow:

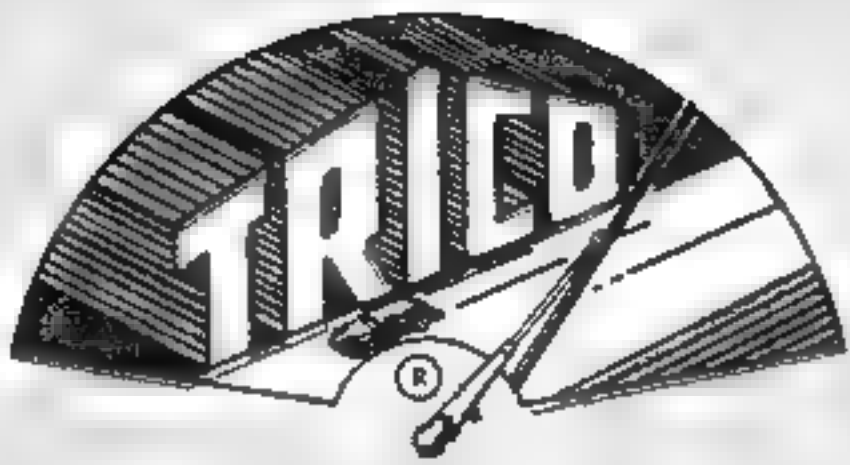

1. **WIPER RUNS TOO LONG OR TOO SHORT A PERIOD** ... Timing adjustment screw regulates wiper cycle ... turn clockwise to lengthen operation and counterclockwise to shorten.
2. **WASHER SQUIRTS ... WIPER WON'T START.** Check line to coupler for obstruction. If line is clear, apply vacuum direct to coupler. If coupler operates, service pump ... if coupler fails to operate, service coupler.
3. **WASHER SQUIRTS ... WIPER WON'T STOP.** Remove timing and adjustment screw. Press control several times to flush out obstruction. Reinstall screw and adjust wiper timing cycle.

Foot Operated WASHER

Foot Operated Washer check.

1. **CHECK WATER AT NOZZLES** ... Remove washer nozzles. Press foot lever. If water flows from nozzle parts, clean or replace nozzles. If water fails to appear proceed to next step.
2. **CHECK HOSE LINES** ... Remove hose lines and check for obstruction or bind. If hose is O.K. proceed to next step.
3. **CHECK FOOT LEVER** ... Remove hose at foot pump. Hold finger over hose connection on pump and press lever to test pump action. If pump operates O.K. service washer cover assembly.

WASHER CHECK • WIPER ARM INSTALLATION

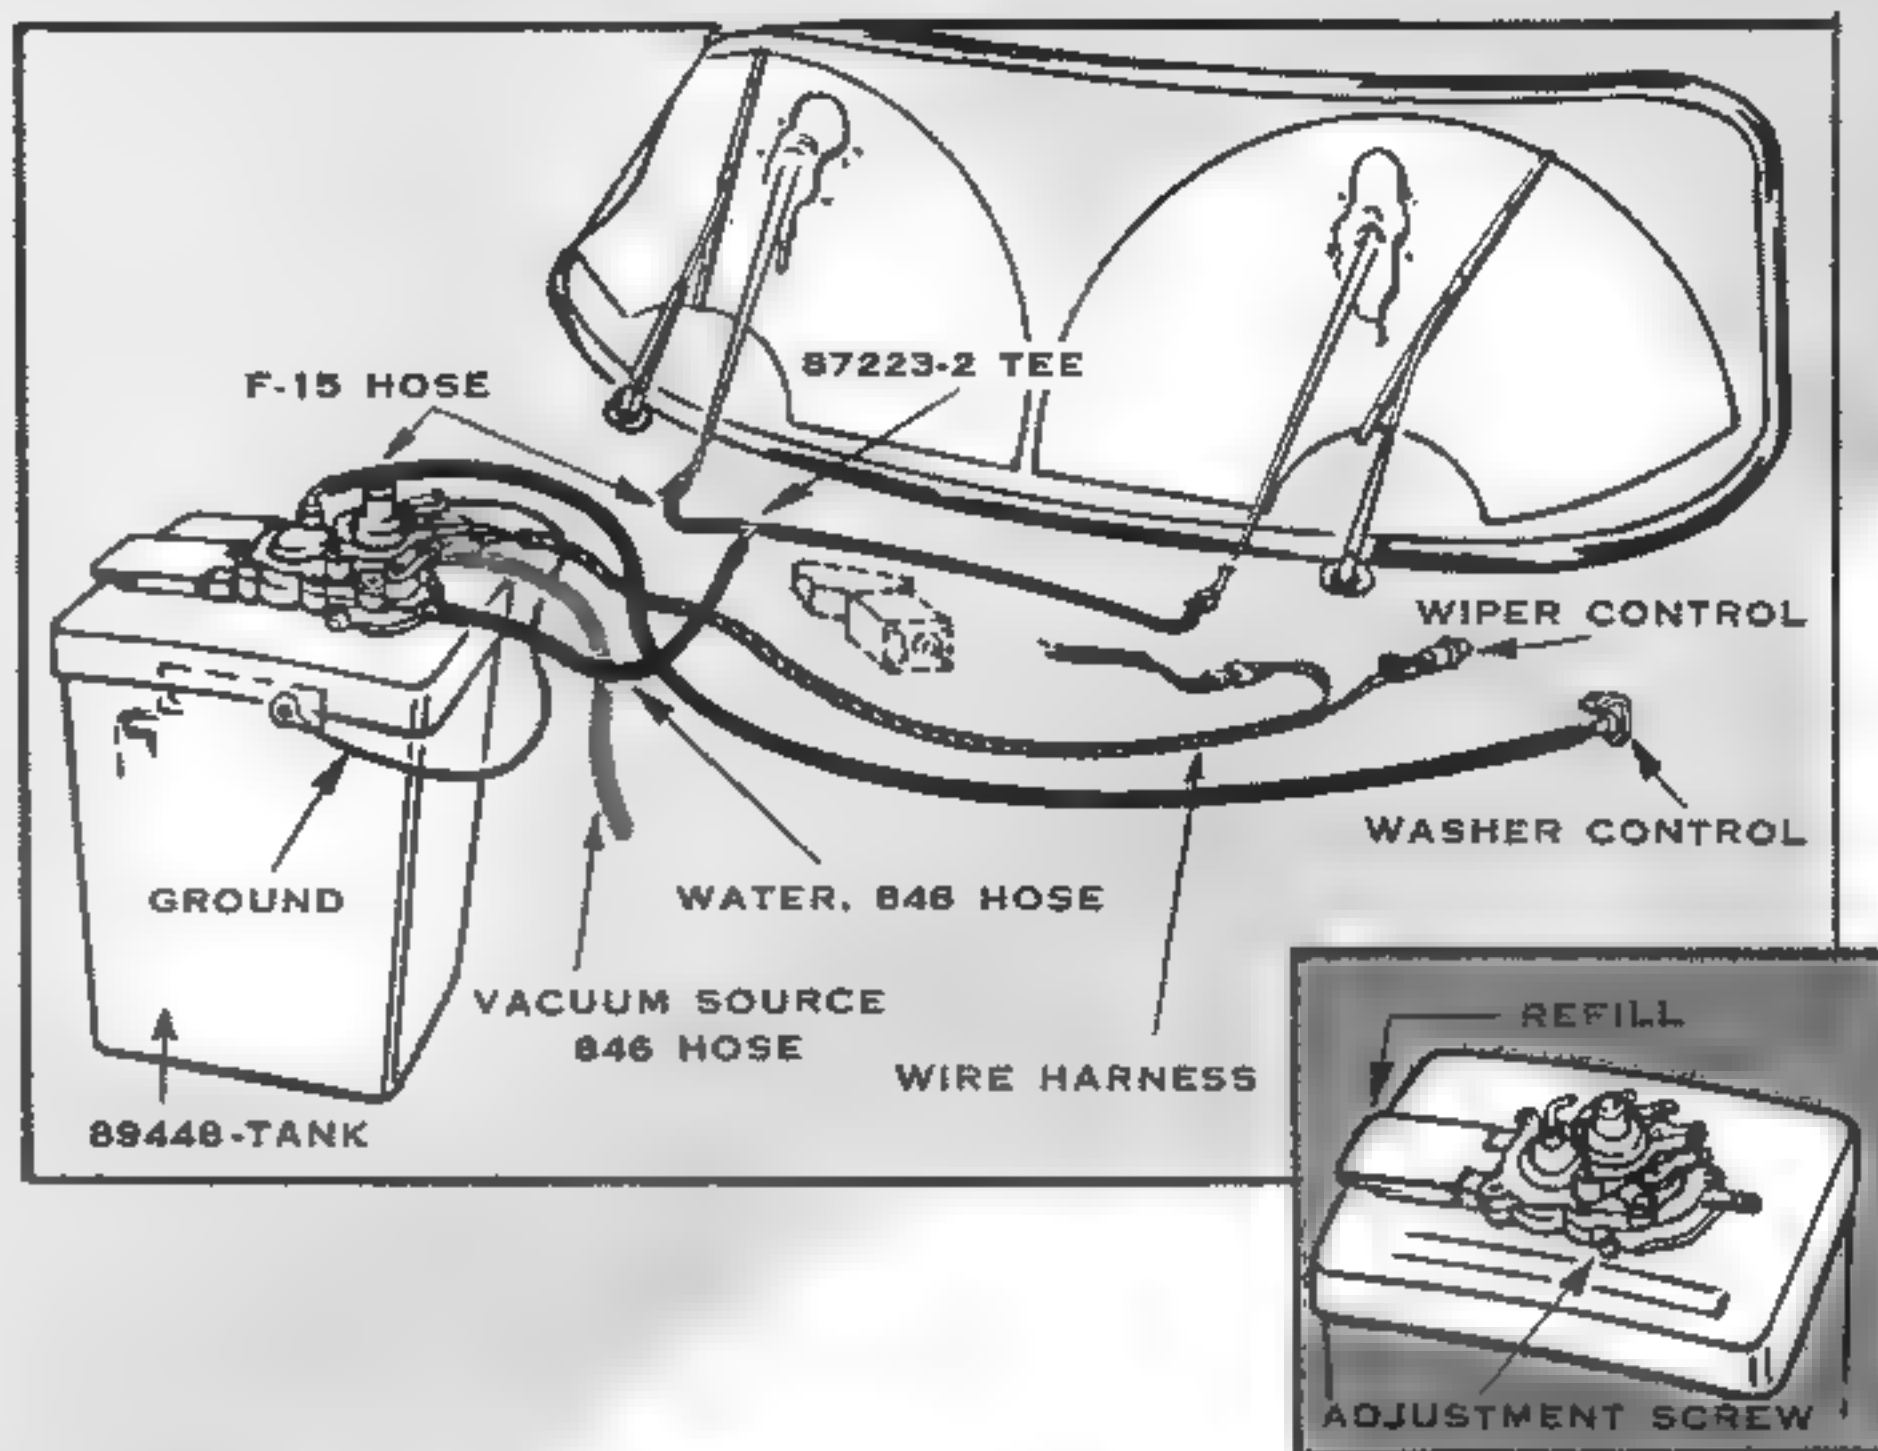

Coordinated WASHER

with self-starting . . . self-stopping control for electric wipers.

To check follow general instructions.

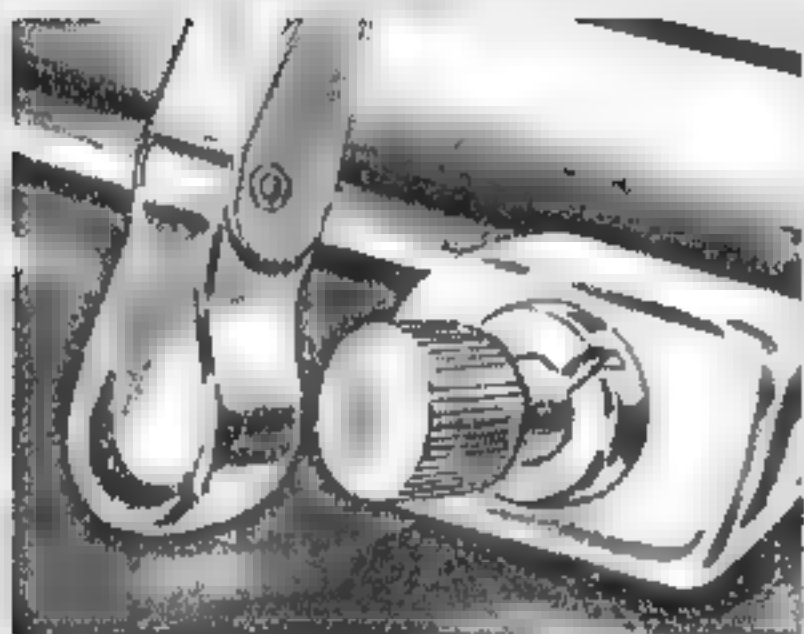

Special instructions:

1. **WIPER RUNS TOO LONG OR TOO SHORT A PERIOD . . .** Timing adjustment screw regulates wiping cycle . . . turn clockwise to lengthen operation and counterclockwise to shorten.
2. **WASHER SQUIRTS . . . WIPER WON'T START.** Check wire harness and ground connection. Make sure electrical contact is being made through all connections.
3. **WASHER SQUIRTS . . . WIPER WON'T STOP.** Remove timing and adjustment screw. Press control several times to flush out obstruction. Reinstall screw and adjust wiper timing cycle.

WINDSHIELD WIPER ARM INSTALLATION

Adjustable Wiper Arms listed on page 3

Knurled Shaft . . .

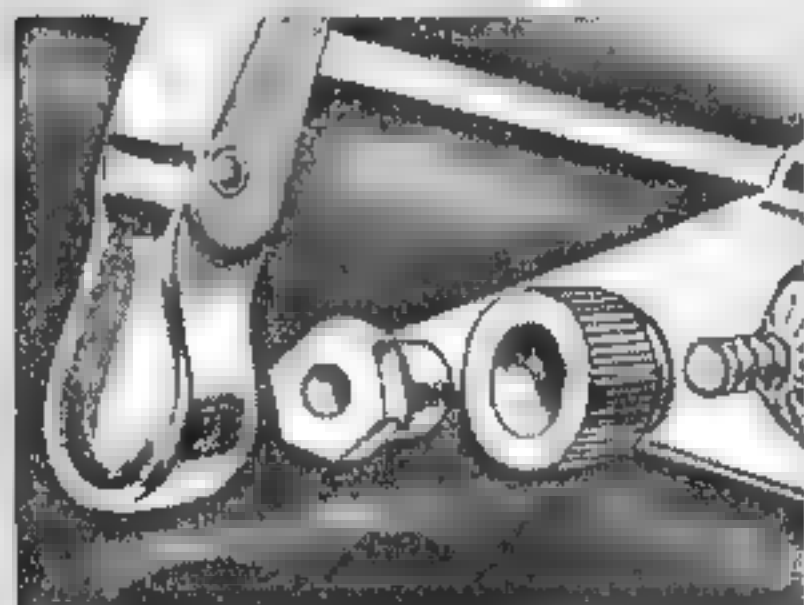

No adaptors required. Equipment on most cars since 1941. Just press arm on shaft.

Arm Removal . . .

To remove Arm from knurled shaft, slide PULLER over arm end as illustrated below. Pull straight out with puller tool while lifting blade end of arm away from glass. For other wiper arms with lock nut or locking screw use screwdriver or wrench.

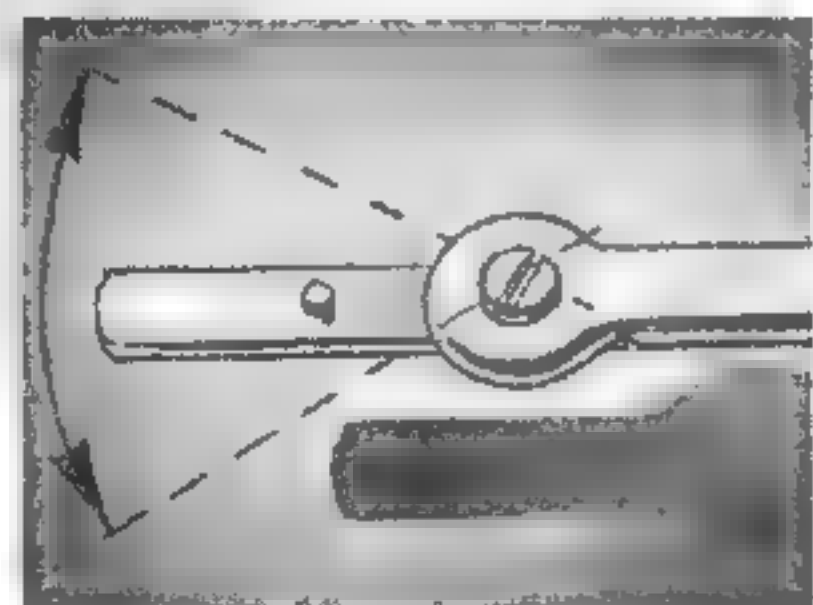

Arm Installation . . .

Turn wiper on, then off, to position wiper shaft in park position. Install arm at desired parking angle. Spring lock in arm head must snap behind driver.

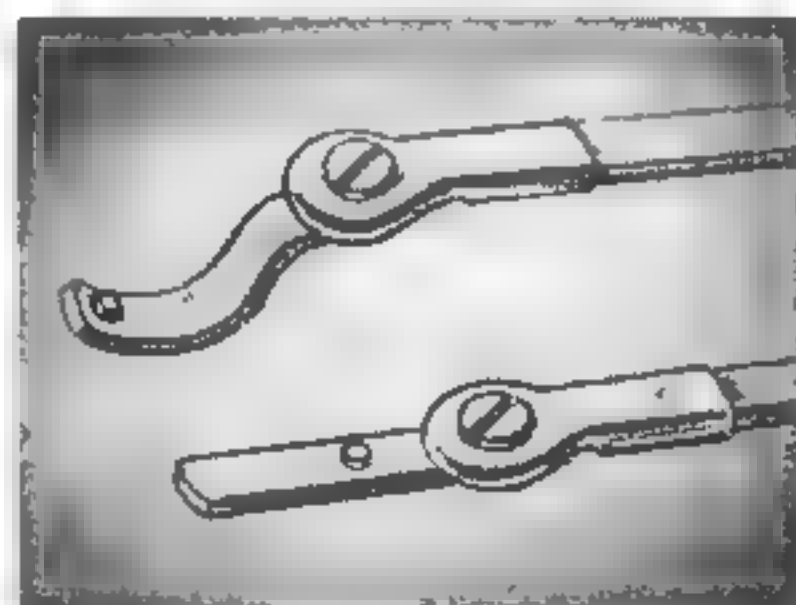

Threaded Shaft . . .

Convert to knurled type with adaptor and lock nut. Equipment on most cars, 1936 to 1940 and continuing on electric wipers 1941 to present.

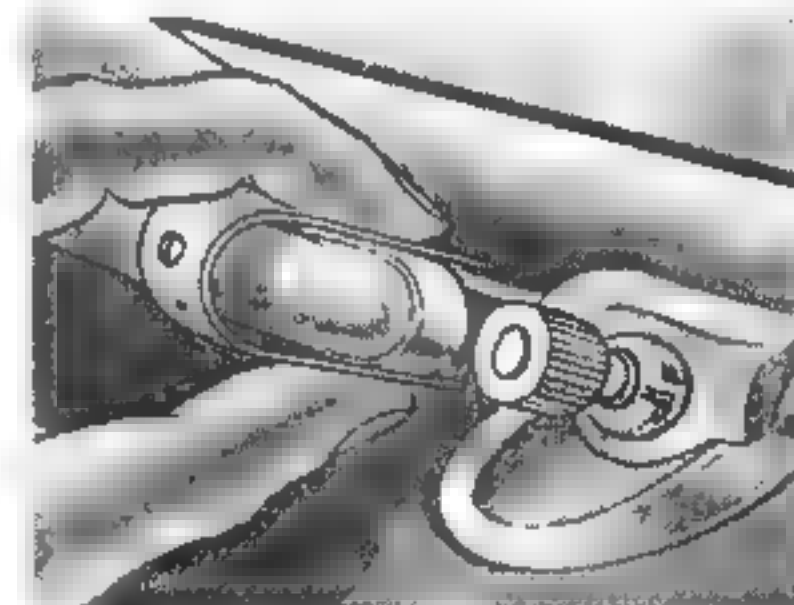

Blade Angle . . .

Swivel at blade connector permits setting blade at correct angle for each windshield.

Blade Attachment . . .

Wiper arm is packed with wrist action clip installed. Bayonet clip is supplied in package with each arm for conversion when needed.

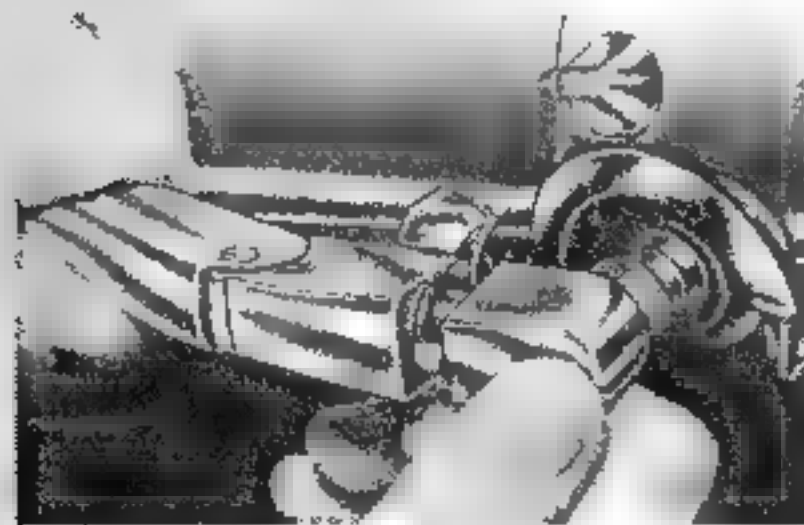

Arm Puller Tool . . .

For faster arm service use Trico Arm Puller Tool No. 32438-2.

Cam-O-Matic Wiper Arms . . .

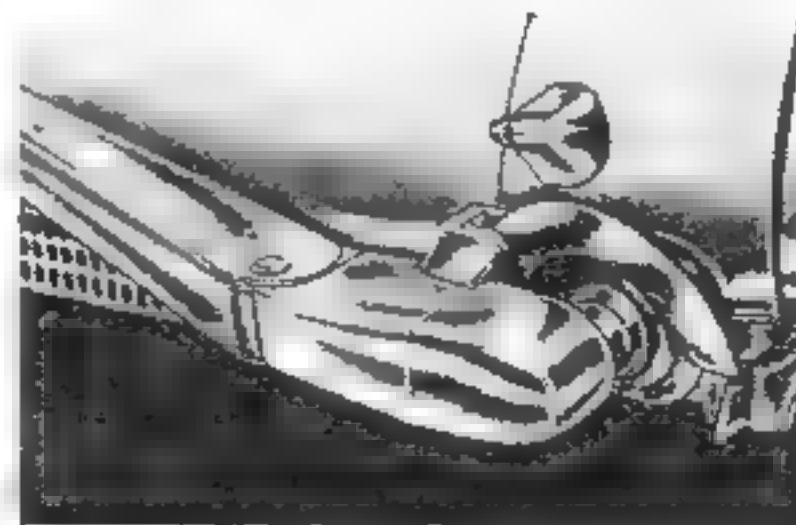

Cam-O-Matic Wiper Arms are designed for operation with the Cam-O-Matic wiper system first used on 1955 Cadillac, Packard, and Buick Roadmaster. See page 3.

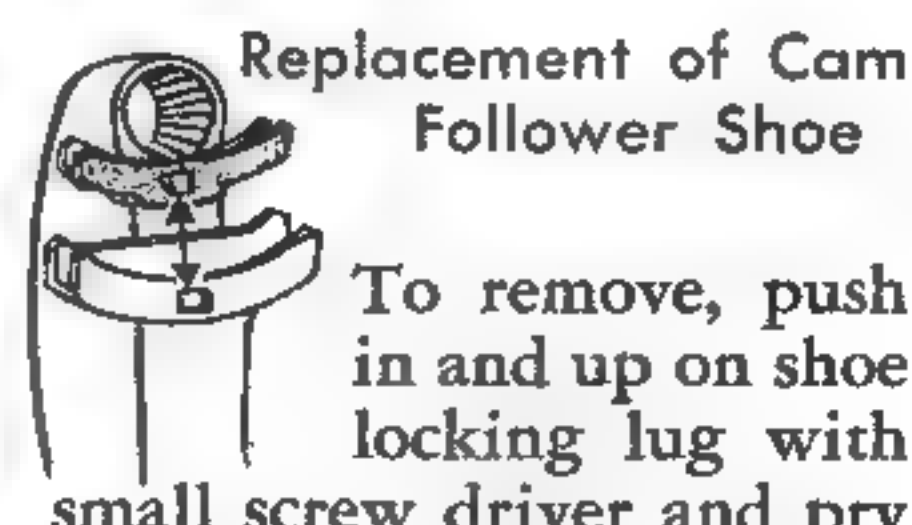

1. Position arm head on shaft—in park position—elongate arm to maximum position.

2. Push in on arm head, allowing the cam follower to line up with edge of cam.

3. Release the arm and allow follower to engage cam.

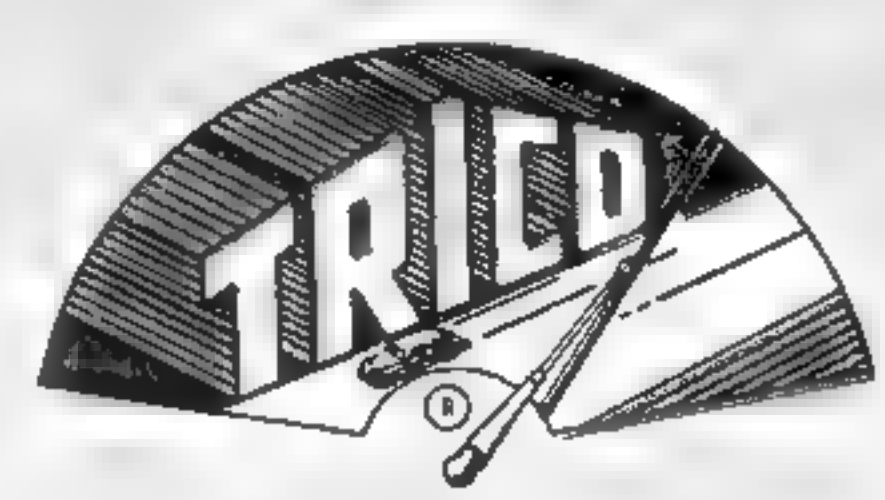

Replacement of Cam Follower Shoe

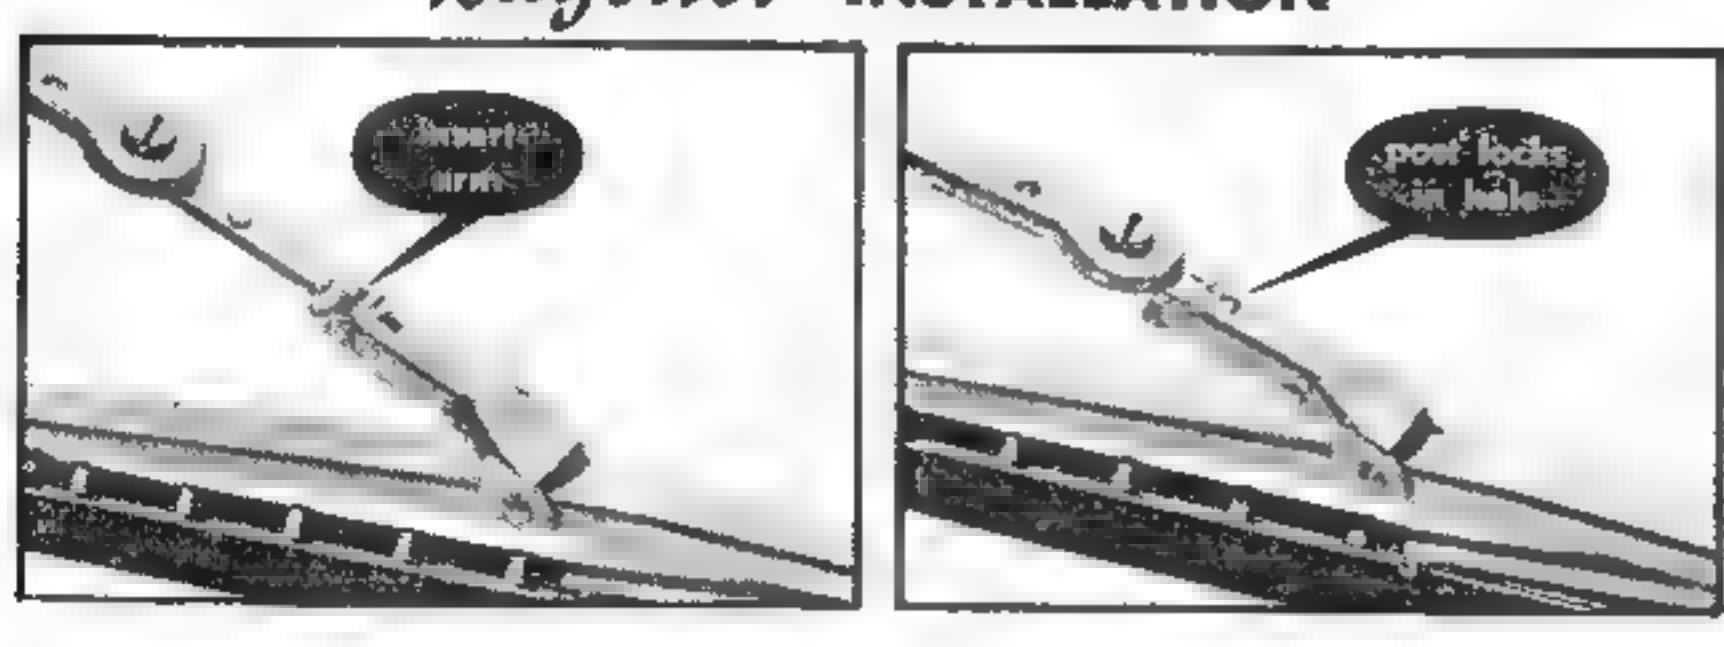

To remove, push in and up on shoe locking lug with small screw driver and pry out.

To install shoe, press in place until lug engages hole in cam follower.
